**DR. ANDERSON'S  
BREAKFAST OF CHAMPIONS**

UK NATIONAL ALUMNI ASSOCIATION ACTIVITIES!  
**WILDCAT WARMUPS**  
 ON THE ROAD WITH THE 'CATS IN '88!

**AUBURN** (Sept. 10 at 7 pm \*) - Auburn, AL.

'WILDCAT WARMUP' RECEPTION at The Auburn University Hotel & Convention Center at 5 pm\* Hot hors d'oeuvres, snacks and cash bar...Just like 'tailgating'...Hotel located within walking distance of stadium...

\$ 8.00 per person

**INDIANA** (Sept. 17 at 2 pm\*) - Bloomington, IN

'WILDCAT WARMUP' at The Holiday Inn-Bloomington at 11:30 am\* 'light lunch' and cash bar

\$ 8.50 per person

**TENNESSEE** (Nov. 19 at 1:30 pm\*) - Knoxville, TN

'WILDCAT WARMUP' at The Hilton-Knoxville at 11 am\* Plenty of time to get to the game...Meet with friends for chili, sandwich & dessert... cash bar ....

\$ 9.00 per person

\*times subject to change

**Convenient, Economical & FUN!**  
**ONE-DAY BUS TRIPS.....**

**TO IU GAME** - Leave Commonwealth Stadium Saturday, Sept. 17, at 9 am via charter bus to Bloomington...Arrive in time for 'light' lunch at the Association 'Wildcat Warmup'.. Return following the game..Enjoy a Big Kentucky-style buffet at The Ramada Inn on Hurstborne Lane in Louisville..Join us for a 'first class' trip with UK alumni and friends! *Trip includes* round-trip charter bus, game ticket, 'Wildcat Warmup', buffet and set-ups on bus. (If you have game tickets, trip only \$54 pp) \$ 70 per person

**TO TENN. GAME** - Leave Commonwealth Stadium Saturday, Nov. 19 at 8 am via charter bus to Knoxville..Arrive and attend 'Wildcat Warmup' at Hilton-Knoxville..Return following game with stop for dinner at Holiday Inn-Cove Lake...Another UK Alumni Association 'first class' trip. *Trip includes* round-trip charter bus, game ticket, 'Wildcat Warmup', return buffet and set-ups on bus

(If you have game tickets, trip only \$51 pp) \$ 70 per person

My check payable to "UK Alumni Association" is attached. I understand that a full return will be made if I cancel my reservation prior to August 15. There is no guarantee a refund can be made after August 15.

## Honorary Degree Recipients

Another festive graduation day has come and gone. May 8 marked the 121st UK graduation with over 1,765 members of the August and December '87 class receiving degrees, and 2,864 degree candidates for the May '88 class.

It is traditional that UK, by bestowing honorary degrees at commencement, recognize the contributions of talented and generous people who have contributed to the well being of Kentucky citizens for many years.

This year's honorees include Mary Marvin Breckinridge Patterson, receiving the Doctor of Letters; Joseph A. Boyd, the Doctor of Science; and Robert D. Bell, the Doctor of Laws.

President Roselle & Mary Breckinridge Patterson

Patterson, born in New York to a family well known in Kentucky for its distinguished record of public service, was taught as a child that those with the opportunity should contribute to society. She is best known in Kentucky for her active support of the Frontier Nursing Service; support covering a span of 60 years. In 1928, she served as the first girl courier for the Frontier Nursing Service. The organization, based in Hyden was founded by her cousin, Mary Breckenridge three years earlier.

A Vassar graduate, she later returned to Kentucky to film *The Forgotten Frontier*, riding over 600 miles on horseback to film the FNS handling childbirth and other medical emergencies. She has served on the FNS Board of Governors since 1955 and as chairman from 1960-1975.

She was also cited for her distinguished career as a published writer and photographer, and as a CBS broadcaster giving first hand reports on the German invasion of Europe when the new medium of radio was changing how Americans viewed international events. On several occasions she was among the last to be evacuated from an occupied country.

After her marriage to a diplomat, Patterson gave up her career to devote her energies to supplementing her husband's work and was instrumental in changing the perceived role of a Foreign Service wife.

Joseph Boyd '46, '49

Boyd '46, '49 has enjoyed success in three distinct and demanding fields, each marked by achievement. He has been an educator, a scientist, and is now the president of Harris Corporation, a manufacturer of communication and information processing equipment for a world-wide information technology market.

Becoming a full professor of engineering at the University of Michigan in 1958, he changed careers to become the director of the University's Institute of Science and Technology. In 1962 Boyd joined Radiation, Inc., a Florida aerospace communications firm. After a merger with Harris Intertype Company of Cleveland, the company became the Harris Corporation.

A fellow of the Institute of Electrical and Electronic Engineers, he is a vice president and director of the Machinery and Allied Products Institute, and a director of the Southeast Banking Corporation in Miami, Fla. He is a member of the President's Export Council which works toward improving international trade, and the Florida Council of 100

# Learning to Listen

which promotes social and economic growth in the state. He is on the board of Microelectronics and Computer Technology Corporation in Austin, Texas and served recently as interim chief executive.

He received one of the first annual Kentucky Advocates Outstanding Alumnus of Kentucky Award, the OAK Award, in 1987.

Boyd has taken a special interest in UK. He is a UK Fellow, a Distinguished Alumnus of the College of Engineering and, recently, through the Harris Corporation, made a gift to the College of Engineering of an entire computer system.

Robert D. Bell '49

Bell '49 has distinguished himself in service to the business world, and for nearly 30 years, to the Commonwealth of Kentucky, including serving the administration of five Kentucky governors.

His business career has included positions with Ernst & Whinney where he served as regional manager of management consulting services responsible for consulting service to state and local governments through the Midwest and Southwestern states. He later joined Ashland Oil, Inc., where he began as

an executive assistant to management. He became vice president for state relations and was an administrative vice president, responsible for federal and state government relations, public affairs, and public and media relations. He also served as chairman of the board of trustees of the Ashland Oil Foundation, Inc. Bell elected early retirement in 1986.

He is chairman of Kentucky Advocates for Higher Education, Inc., sits on the board of directors of the Governor's Scholars Program and Leadership Kentucky. He is a member of the Prichard Committee for Educational Excellence, the Executive Committee of the UK Development Council and is a UK Fellow. He is a former member of the Kentucky Council on Higher Education and of the Kentucky Tomorrow Commission.

For his work, Bell has received an honorary Doctorate of Law from Eastern Kentucky University and a Distinguished Service Award from Kentucky State University as well.

Graduate Beginnings

### New ODK Members

Several UK alumni, including two faculty members, are new members of Omicron Delta Kappa honorary society.

The spring 1988 alumni and faculty-staff initiates are: State Representative Michael R. Moloney '65, *Honoris Causa*; Leonard S. Chauvin Jr. '57, Robert E. Lee, and A. Ronald Turner '67, *Alumni*; Doris Wilkinson '58, M. Ward Crowe '53, and James P. Chapman, *Faculty-Staff*. There are also 16 student initiates.

ODK was founded December 3, 1914, as a national leadership society for college men, at Washington Lee University. The society recognizes and encourages the achievement of exemplary character and superior quality in scholarship and leadership. Membership is as much an obligation and responsibility in citizenship as it is a mark of highest distinction and honor.

The University circle of ODK was founded May 4, 1925.

Great Teacher honorees for 1988 are, second from left, Joan Blythe, English, Lexington campus; Charles W. Byers, vocational education, Lexington campus; Thomas Ingram, marketing, Lexington campus; James Murley, humanities, Elizabethtown Community College; and Opal Conley, biological sciences, Ashland Community College. At far left is selection committee chairperson Kay Bell; far right, Association president Jack Guthrie.

Dr. David Roselle receives the University's president's medallion from Trustee Chairman Robert McCowan. The medallion was commissioned 18 years ago by alumnus C. Robert "Buss" Yeager '33 and presented to former president Otis A. Singletary who gave it to the University during the investiture ceremony for Dr. Roselle April 14.

# Learning to Listen

DR. RICE C. LEACH

By Sandra Thacker

“A combination of fate and interest got me into community medicine,” states Rice C. Leach M.D., UK College of Medicine Class of 1966. “The interest began at UK. Kurt Dueschle was chairman of community medicine and he had worked with the Navajos in the past. We talked a lot about that experience. Then, for a senior elective in 1965, I went to Bolivia to do epidemiologic studies in a small mountain community and that really sharpened my interest.”

The *fate* catalyst was of a more personal nature. “When I was about four months into my internship, I was operated on for a malignant melanoma. At that time, the average survival for my particular melanoma was 33 months. That experience gave me a new perspective on the patient-doctor relationship and influenced my philosophy of practicing medicine.”

Since 1967, Leach has worked mostly with the Indian Health Service in Arizona and South Dakota. He believes that his own experience as a patient helped him to develop a better understanding and respect for his patients.

“A major attraction of my work with the Indian Health Service has been the people. They are just plain ‘fun’ to work with. They have a fantastic sense of humor and really enjoy life.” Leach, a Bluegrass native, likens Indians to Kentuckians from Appalachia in as much as they tend to be “cautious until they get to know you.” He also notes that “they form individual opinions and accept you one at a time and don’t hold the long history of U.S. government/American Indian relationships against you personally.”

The health problems of Indians are often different. “Tuberculosis used to be a major health problem for Indians,” Leach states. “For example, during World War II, large numbers of Indian draftees were rejected because they had TB.” It was that factor which was instrumental in forming the Indian Health Service.

Although TB is not currently as big of a health issue for Indians, it was still prevalent when Leach began his PHS career. Throughout the 1960s, Indians still had an incidence rate approximately twice the national average and the Service invested a lot of energy into tracking TB occurrence epidemiologically, and into getting nurses out into the communities to supervise medication, etc.

“I learned to listen to the patient community regarding their needs. Then I made deals that both the patient and the medical team could live with.”

DR. RICE C. LEACH

“Tuberculosis in Navajo women was a particularly disruptive situation,” explains Leach, “because back then the woman tended to be the central force in the family. She managed the sheep, cared for the children, and ran the home. If we put her in the tuberculosis sanitarium, things frequently fell apart. The sheep got sold for drinking money and no one looked after the children or the elders.”

Consequently, PHS workers often had difficulty finding the patient once she was diagnosed. “When we prescribed a sanitarium stay, our patient was likely to leave for the summer sheep camp to avoid being ‘sent away’.”

So, the Service developed a network of outpatient clinics and home care offering more convenient, more flexible, and more comprehensive medical services.

“I learned to listen to the patient community regarding their needs. Then I made deals that both the patient and the medical team could live with,” explains Leach. “If we offered a comprehensive clinic where the patient could receive medical tests, medication, and bring the kids in for an inoculation at the same time, then go right back home . . . they’d be there. So that’s what we did. Out here, if you want to get the job done . . . you have to do it the patient’s way even if it is a little different. But, if the alternative is legal and safe . . . try it.”

One of Leach’s most interesting experiences was as associate director for Health Services Delivery for the Indian

Health Service Office of Research and Development, in Tucson, Ariz.

“Among other things, the position included field consultation and evaluation of health services delivery programs in the IHS, and serving as site project officer for the STARPAHC program,” he explains. STARPAHC was a joint venture by the IHS, NASA, and Lockheed Missile and Space Corporation, and the Papago Tribe of Arizona. Its objective was to test the applicability of telecommunications systems (television, laboratory, ECG telemetry, X-ray, and health records) in a rural setting.

“Reconciling the needs of an organization like NASA with the philosophies and needs of the Indians who had lived on this particular site for 10,000 years was quite a challenge at times,” he said with a chuckle.

He remembers one incident in particular. “NASA was using a van capable of transmitting health information via microwave to the local IHS hospital,” he explains. “To transmit, the van had to be parked at a particular site, facing a specific microwave tower, etc.

“The van went into a village and parked. I immediately received a complaint from a village elder. It seems that the van had parked on the exact spot where his dog napped every afternoon. He wanted the van moved because the dog was there first.

“When I called NASA and told them why the van had to relocate, they were incredulous.” Leach explained that refusing would be very bad judgement

on NASA’s part and could result in some youthful mischief such as missing hubcaps or possibly other more important equipment. However, if the elder saw that NASA respected his needs, he would probably ensure that every youngster within hearing knew that the van was there to benefit the people. “It was a question of winning a battle . . . or winning a war,” Leach said laughing.

“To their credit, NASA moved the van. The dog got his nap. The elder received his due respect. In short, everyone was pleased.”

Leach’s commitment to his “community of patients” has not gone unnoticed. In May 1987, Amherst College, his undergraduate alma mater, conferred that institution’s honorary degree of Doctor of Science on him.

In bestowing the degree, Amherst stated: “After earning your medical degree at the University of Kentucky, you turned your back on all prospects of a lucrative private practice and chose, instead, to work in communities of lowest income and greatest need, including places as far afield as Guatemala and Bolivia. But your principal ministrations have been to the Indians of the Dakotas and the South West; you have brought health care to the Hopi, Navajo, Winnebago, Chippewa, Sioux, and Papago peoples. Your selfless work has made this College proud to claim you as its own.”

And, this University, too.

CHARLES E. BARNHART

# MR. AGRICULTURE

In 1948, a young swine nutritionist from Iowa State University was interviewed for a position in the College of Agriculture. The dean of the college, Thomas Poe Cooper, asked him if he planned to stay if he were hired, or to get a few years of experience and look for another position. That young man said simply, "That depends, sir. If we like it, we'll probably stay. If not, we'll probably leave."

After 40 years, the swine nutritionist from Iowa State is leaving. Charles E. Barnhart is retiring as dean of the College of Agriculture, a position he has held for the past 19 years.

During those 40 years, Barnhart has distinguished himself as a world renowned swine researcher and an administrator.

Barnhart, whose early research into swine nutrition resulted in several patents, became director of the Agricultural Experiment Station in 1966. As director of the Experiment

---

---

*As an internationally recognized authority on animal nutrition, Barnhart is the author or co-author of more than 100 scientific and popular publications on swine and swine nutrition.*

---

---

Station, he was responsible for administering all the research projects of the College of Agriculture.

Barnhart became dean of the College of Agriculture in 1969, after the death of Dr. William Seay, who was killed when a plane he was piloting crashed in West Virginia.

When Barnhart assumed the position of dean, he also kept the title of director

of the Agricultural Experiment Station and assumed the title of director of the Cooperative Extension Service.

During his tenure as dean, Barnhart has expanded the breadth and scope of research within the college and has multiplied the number of research projects and journal articles coming from UK's Ag college. Several departments within the College of Agriculture are now nationally and internationally recognized for their excellence in research.

Under his leadership, the college has kept pace with the larger framework of science and has instituted programs in biotechnology, energy management, animal and plant genetics and immunology.

Upon becoming dean, Barnhart restructured the college's Cooperative Extension Service to encourage improved communication with the users of the system. Instead of an area concept, in which agents and area subject specialists worked with a large

geographic region, Barnhart re-established the county-based concept of Extension programs, with agents for agriculture, 4-H and home economics headquartered in every county.

"Through a field staff of county Extension agents," Barnhart said, "your UK College of Agriculture is as close to you as your county seat and as easy to reach as dialing your telephone."

To facilitate client involvement with the College of Agriculture, Barnhart also established 18 commodity advisory groups to identify needs and garner support to achieve those needs.

Facilities within the college were modernized, largely due to his efforts to make those needs known. The Agricultural Sciences South Building, the West Kentucky Research and Education Center at Princeton, the Kentucky Leadership Center at Jabez and the Gluck Equine Center were built during the Barnhart administration. Two buildings are currently under construction: the Regulatory Services Building and the Agricultural Engineering Building.

Instructional programs continued to expand in both scope and breadth during his tenure as dean. Programs for students headed toward careers in agribusiness and research augmented

those already established for students planning to return to farming.

As an internationally recognized authority on animal nutrition, Barnhart is the author or co-author of more than 100 scientific and popular publications on swine and swine nutrition. He also is well known to the nation's livestock industry and earlier in his career served on swine breed type standardization committees and judged many state fair and national swine shows. He brought several prize trophies back to the University of Kentucky, including one in 1959 for the Grand Champion barrow at the International Livestock Show in Chicago.

In recognition of his outstanding work in livestock, Barnhart was inducted into the Livestock Hall of Fame in 1987 by the Saddle and Sirloin Club. His portrait is now hanging at the Louisville Fair and Exposition Center along with those of other important industry notables.

In 1962, he was named "Man of the Year in Service to Kentucky Agriculture," by *Progressive Farmer*, a regional magazine. In 1979, he was named "Man of the Year in Kentucky Agriculture" by the Agricultural Communicators of Kentucky, a professional organization of the farm press. He also received the

"Distinguished Kentuckian Award" from the *Kentucky Farmer* magazine that same year.

Barnhart has served on the Governor's Council on Agriculture, the Governor's Council for Rural Development, the Kentucky State Fair Board, Kentucky Tobacco Research Board, State Board of Agriculture, the Kentucky Development Committee and Experiment Station Council on Policy, a national committee. He also was a member of the Kentucky Farm Bureau board of directors.

For the University of Kentucky, Barnhart has served as a member of the Research Foundation board of directors and the Campus Planning Committee. He also has served on the University Research Committee, University Senate and the Graduate School.

Barnhart, a native of Windsor, Ill., was reared on a farm near Greenfield, Ind. He received a bachelor of science degree in animal husbandry from Purdue University in 1945, a master of science degree in animal production and veterinary physiology from Iowa State University in 1948 and a Ph.D. in animal nutrition, bacteriology and veterinary physiology from Iowa State in 1954.

*Randy Weckman is an extension information specialist in the UK College of Agriculture.*

# SUPERPOWER SEMANTICS

BY JEFF WORLEY

In the battle of ideas the  
necessary ammunition  
is the manipulation of words and concepts.

**H**anging conspicuously on a wall of Political Science Professor Daniel Nelson's office 16 floors above the University of Kentucky campus is an M.C. Escher print. As usual, Escher is playing tricks on us: pillars connect floors to ceilings at impossible angles; a winding staircase seems to rise perceptibly step by step, but when we look again we see that it is taking the two climbers no higher at all.

Escher makes the point that things are not what they appear to be at first glance. His artful deception is, in a sense, a visual analogy to another type of duplicity which Nelson has been studying for several years—the deceptive use of language, especially when utilized by representatives of different political systems.

In order to document differences in meaning behind political concepts, Nelson and a team of graduate assistants have researched the use of 40 words and concepts common in international discourse. The study is focused on political language as used by authoritative speakers in the United States and the Soviet Union.

"To insure accuracy, we have

utilized only original sources—quotes by Soviet and American leaders from established publications. We have purposely varied our citations from any one source, *Pravda* or *Izvestia*, for example, or any one spokesman," Nelson says. "This is an academic project which is generating even-handed essays that state succinctly what U.S. and Soviet usages are."

Nelson stresses the point that the purpose is not to create any anti-Soviet statement; the objective is to provide useful information.

Although there are dictionaries and other reference tools that deal with such political concepts as "disarmament," "freedom," "peace," and "terrorism," this is the first project which explicitly compares and juxtaposes usage by representatives of the Superpowers. Nelson sends each two-page essay, detailing U.S. and Soviet use of a recurrent political concept, to the U.S. Information Agency, which is funding the research. Charles Wick, director of the USIA, must approve Nelson's draft in conjunction with the Policy Guidance Staff, an in-house think tank, before the information is translated into French,

# АКАДЕМГОРОДОК. ПУТИ И... ТУПИКИ?

ПЕРЕСТРОЙКА: ШАГ ЗА ШАГОМ

Spanish and Arabic. The essays are then collected and sent to diplomatic posts around the world.

A major purpose of these short papers is to alert recipients to the manipulation and abuse of political concepts. "There are many ways," Nelson says, "in which any Superpower—not just the U.S.S.R. but any Superpower—can use and abuse key concepts. Both Superpowers use propaganda and disinformation in order to attempt to change the behavior of others. In the battle of ideas the necessary ammunition is the manipulation of words and concepts."

In the essays he writes and sends to the USIA, Nelson deliberately avoids citing specific instances. "The inclusion of examples might easily offend some officials in diplomatic offices, who would then be much less receptive to the entire project," he explained. In previous research, however, Nelson has included discussion of specific instances in order to show how these concepts are understood by the Superpowers.

Nelson mentions the concept of human rights as perhaps the best example of language manipulation by the Soviets. Although the United Nations' Universal Declaration of Human Rights (1948) and the Helsinki Agreement (1975) enumerate the rights to "human contact," the "reunification of families," and other rights to freedom of movement, the Soviet Union has restricted the meaning of human rights when the discussion turns to conditions within its country.

The U.S.S.R. speaks of guarantees of social and economic equality and justice when defending the Communist Party's record on human rights in the Soviet Union, asserting that the Party has ensured a right to work, leisure, health, well-being, and education. This statement includes only a few of the many rights listed in the U.N. Declaration, forgetting entirely those which emphasize political and religious

expression or due process under law.

Nelson goes on to say that dissent and criticism of the Communist Party by Soviet citizens are not regarded as a human right but as "subversive activity." Such political and legal aspects of human rights are, however, often discussed by Soviet leaders or journalists when commenting on conditions within the U.S. For example, Soviet journalists seek to portray cases such as the arrest or conviction of black, American Indian, or other minorities as de facto "political repression."

Put simply, the U.S.S.R. expands or contracts the meaning of human rights as needed in an attempt to fortify its position.

Although not a part of the Nelson study, others maintain that similar language manipulation is evident in U.S. policies. For example, in a recent article investigative reporter Tim Weiner of Knight Ridder, points out that the Pentagon's recently publicized interpretation of the "use of space for peaceful purposes" has been extended to include military uses of space.

International treaties, signed by the U.S. and U.S.S.R., forbid the military use of space. When Congress asked Pentagon officials whether the installation of C3I systems (a communications network of orbiting satellites that could command and control the nation's nuclear forces during and after World War III) would violate these agreements, the Pentagon replied, Weiner reported, that the U.S. interprets "the right to use space for peaceful purposes to include military uses of space to promote peace in the world."

In his study of semantic corruption, Nelson has had his "worst fears confirmed. In looking over great amounts of material, I believe that the two Superpowers are still very far apart in terms of speaking to each other;

**The lack of agreement about meanings is sometimes quite purposeful. To acknowledge differences in meaning is to acknowledge that there are two valid interpretations.**

**PROFESSOR NELSON**

instead, they continue to talk past each other."

The problem, Nelson says, is not in the denotation, or dictionary meaning of words, but in their connotations, the meanings suggested by or associated with the words. "Even when the denotation of a word is identical ('unemployment' is when people are out of work), the Superpowers accuse each other of failing to take into consideration the needs of the workers. And connotation can be manipulated for political purposes regardless of denotation."

Connotation especially breaks down when sides begin to cite examples. "Genocide." Where does it exist, under what conditions? When has it occurred? The U.S. and U.S.S.R. would agree about genocide during the Nazi period, but there is no agreement about other instances in which thousands of people were systematically killed. In discussing Idi Amin's reign in Uganda, for example, the U.S. refers to the deaths of hundreds of thousands of Ugandans as genocide; the U.S.S.R. does not use the term to refer to these same deaths. The Soviets, on the other hand, characterize as genocidal those South African policies that have led to the killing of thousands of blacks; the Reagan Administration does not see it that way.

"The lack of agreement about meanings is sometimes quite purposeful. To acknowledge differences in meaning is to acknowledge that there are two valid interpretations," Nelson pointed out.

Problems of communication are not just a function of language use, but a function of entrenched mistrust. The conceptualization of language is merely symptomatic of underlying differences, and its use is modified according to the exigencies of events.

Nelson adds that the gulf of understanding widens when the Superpowers take hard-line positions,

for example, the Soviet Union on Czechoslovakia in 1968 and Afghanistan in 1979, or when the leaders take strong ideological stances. "Ronald Reagan's use of language in his 'Evil Empire' speech was clearly inflammatory. The choice of modifiers was not designed to calm nerves," Nelson said.

Although there might seem to be indications that the problem of communication is worsening, Nelson believes that this is not the case. "The capabilities to communicate are greater than they've ever been. Many universities around the U.S. are now receiving, on a daily basis, the Soviet's evening news program *Vremya* on satellite dish. The long-range prognosis is that the two sides will have a greater understanding of these terms they use in the political arena," Nelson commented.

He hopes that this project will lead to a stronger concordance between the Superpowers. Research has been completed on 35 of the 40 terms selected by the U.S. Information Agency, and 20 have been sent to diplomatic posts in booklet form. "Soon," Nelson says, "all 40 essays will be available in thousands of copies, handed out or mailed out all over the world."

# Breakfast of Champions

By Lissa Atkins

**W**henever Dr. James Anderson, chief of endocrinology, sees a cat or dog, he feels a little guilty. Although his research on nutrition has meant tremendous progress toward understanding and controlling cardiovascular disease, it has also forever changed what these pets are fed.

Anderson has been studying the effect of fiber on serum cholesterol levels—the primary risk factor for cardiovascular disease (CVD)—since the mid-1970s. Knowing that oatmeal effectively lowers serum cholesterol levels, Anderson decided to test oat bran on himself. However, he soon discovered he couldn't find it in any grocery stores. So he called the Quaker Oats Company and was told that oat bran wasn't available there either. Not satisfied with that answer, Anderson called back.

"I said, 'You've got to know something!'" says Anderson. "They checked again and informed me that oat bran was a by-product of milling oats and that it was being put into pet food.

"They reluctantly agreed to send me a 100-pound drum."

That year, 1977, Anderson says he "got religion" and began supplementing his diet with the oat bran. Anderson knew his blood cholesterol level was 285 milligrams per deciliter (mg/dl), a dangerous level inherited from his mother, but had done nothing about it. After five weeks of eating 100 grams of oat bran a day, Anderson found his cholesterol dropped to 175 mg/dl. In 1981, Anderson published his first paper on his oat bran findings; Quaker Oats had a new product and pets no longer had oat bran in their food.

"There is a lot of competition now between manufacturers of oat bran," says Anderson. "Millions of people are eating it. Recently, Quaker Oats has saturated the print media about reasons to eat oat flour and bran. One reason they list is that it lowers blood cholesterol.

"Our work is what really got them into this. Now, though, when I see a cat or dog, I feel a little guilty, because they're not getting their oat bran anymore. Now that bran is so popular, the Quaker Oats company obviously finds it more profitable to sell bran to humans at \$1.59 a box."

James W. Anderson, M.D.

From a human perspective, the animals' sacrifice is worth it. Anderson's work has been so successful that UK was one of five schools nationwide to receive a \$959,000 multi-year grant from the National Institutes of Health (the universities of Alabama, Oregon, Harvard, and Vanderbilt also received funding). With the additional support of \$50,000 from other sources, such as the Quaker Oats Company, four UK principal investigators are exploring different aspects of the fiber-CVD question: Drs. Anderson and Gordon Guthrie, medicine/endocrinology; Geza Bruckner, clinical nutrition; and Thomas Garrity, behavioral science.

It is research that will affect millions of people. Cardiovascular disease is the number one cause of death in Kentucky and the nation. Every year nearly 1,000,000 Americans die from CVD at an estimated cost of \$83 billion. In Kentucky, it will be responsible for the death of about 49 percent of those who die this year. Another six million Americans suffer from symptoms of the disease, such as chest pain, angina, and shortness of breath when walking too fast.

Just over two years into their projects, the professors are specifically researching the role of fiber on different risks of CVD. The principal project, a three-year study, is comparing the effects on serum lipid levels of two diets that are similar except that one calls for substantially more fiber. The other three projects, all two-year studies, examine fiber's role in reducing cholesterol levels and in treating hypertension, and fiber's effect in combination with fish oil on several risk factors of CVD.

The studies are large, involving a number of UK people. Working with the four principal investigators are five UK professors: Norman Gilinsky, medicine; Ralph Miller, medicine; Daniel R. Richardson, physiology and biophysics; Harley McKean, statistics; and Peter Oeltgen, pathology. Approximately 50 others, including nurses, registered dietitians, graduate students and various coordinators, are also part of the team.

## Dr. Anderson's Life-Saving Diet

The New High-Fiber, Low-Cholesterol Way to  
Keep Slim & Stay Healthy

James W. Anderson, M.D.

### Two Diets Put to the Test

Cardiovascular disease is a complex problem influenced by a number of factors including smoking, hypertension, obesity, and familial history of CVD. However, scientists agree that the underlying process of CVD is atherosclerosis, or hardening of the arteries. Through this process, plaques of lipids, cholesterol and scar tissue are deposited on the artery walls. Gradually they become more narrow until a blockage results and there is death of tissue. Because cholesterol is the predominant element in plaques, the leading risk factor for CVD is excessive levels of cholesterol.

Studying the effect of two diets on serum lipid levels, particularly cholesterol amounts, is the aim of the principal part of the project. Directed by Drs. Anderson and Garrity, the

three-year study is comparing the American Heart Association's (AHA) diet, the one most widely recommended to patients with heart disease, to a high-carbohydrate, high-fiber (HCF) diet created by Anderson.

According to Anderson, there are about 20-30 million Americans trying to follow the AHA diet, which is very similar to his diet. Both recommend that people obtain 55 percent of their daily calories from carbohydrates, 25 percent from fat, and 20 percent from protein, while consuming no more than 200 milligrams of cholesterol per 2000 calories. The only difference is in the amount of fiber recommended: the AHA diet suggests 15 grams per 2000 calories while the HCF regime calls for 50 grams. (Two oat bran muffins would provide about nine grams of fiber).

However, that one variation is the reason for the differences in effectiveness. According to Anderson, available data indicate the AHA type diet lowered serum cholesterol concentrations at the most by 7.4 percent, reducing risk for CVD by less than 20 percent. In contrast, preliminary studies by Anderson and other researchers indicate that nutrition intervention with diets generous in dietary fiber lowered serum cholesterol by 15-20 percent with a risk reduction of about 40 percent.

"Our research is persuasive," says Anderson. "However, it's not to the point where there are enough data to persuade the AHA, which is a very conservative group. This match-up is what intrigued the NIH and the reason they gave us the money. I think the study will show that the high-fiber diet is clearly more effective than the one from the AHA."

Testing the diets are 180 men and women, ages 30-50, from Lexington and the surrounding area. Randomly separated into three groups of 60, these participants are basically healthy, except for elevated levels of cholesterol—between 200-300 milligrams per deciliter. This range is considered undesirable, but not serious enough to require immediate drug intervention.

For two years, the participants are eating a prescribed diet. One group is following the AHA diet, one the HCF, and one is consuming whatever they want. This last group is functioning as a control factor for the purposes of comparing results.

## Oat Bran Muffins

2 egg whites  
1 cup skim milk  
1/4 cup applesauce

1-1/2 cups oat bran  
1 cup self-rising flour  
2 teaspoons ground cinnamon

Preheat oven to 400F (205C). Spray 10 (2-1/2-inch) muffin cups with nonstick vegetable coating or line with paper baking cups. Put egg whites in a small bowl; beat until frothy. Add milk and applesauce; stir until combined. In a separate bowl, mix dry ingredients. Add liquids to dry ingredients, mixing just until dry ingredients are moistened; do not beat. Spoon into prepared muffin cups, filling cups two-thirds full. Bake 15 minutes or until golden brown. Makes 10 muffins.

**Per Serving:** Calories 90 | Carbohydrate 15.1 g | Protein 5.4 g | Fat 0.9 g | Cholesterol 0 mg | Fiber 3.6 g | Sodium 23 mg

## A Change in Attitude

One such participant is Tony Burgett, 42, an RN at the Veterans Administration hospital. In the AHA group, Burgett has been following the diet since May 1987. For him, the decision to participate and commit that much time was easy: It could save his life.

"My father and all his brothers and sisters have real bad heart disease," says Burgett. "I knew there was a strong genetic possibility for my having heart problems."

This is the first time Burgett has ever done anything about his possible heart disease problem. Tested for cholesterol and other lipid levels about four years ago, Burgett was told he had normal levels. However, when tested for this project, Burgett found his cholesterol was at 264 milligrams per deciliter, a range considered undesirably high. The test result concerned him because Burgett knew that higher levels of cholesterol means higher risk for heart disease. His experience as a health care professional made him aware of the long-term effects of an unhealthy diet.

Yet, like many other people, Burgett experienced no symptoms of heart disease, nor had any major illnesses or health problems. According to him that's one reason why it's difficult to be persuaded about the seriousness of high cholesterol levels.

"Often times, the thinking is that I don't feel bad so I'm not sick," says Burgett. "It's hard realizing that the best way to fight this is not by taking pills but by not eating certain foods, foods that I love."

For Burgett, this meant giving up fried foods, snacks like ice cream and chocolate, and most dairy products, including his all-time favorite eggs benedict.

"I love eggs benedict, but it's like eating nothing but a big bowl of cholesterol," says Burgett. "They're so bad for you."

Other changes for Burgett include thinking about where he can go out to eat instead of just going on the spur of the moment, something he's likely to do since he's typically very busy. In fact, his entire attitude toward food has changed. Now he closely reads labels and checks ingredients of foods. One principle he follows is that the more easily a food can be consumed, except for eating something raw, the more likely it has lots of fat and sugar in it. For Burgett, this includes fast foods, doughnuts, soft drinks, and various other snacks.

"Food can't be a casual thing," says Burgett. "I've had to change completely. I grew up in Kansas where you ate eggs and drank a big glass of whole milk before you did anything."

## One Day at a Time

To help Burgett and the other participants in the AHA and HCF groups to understand ways to modify their diets, they went through a ten-week education course. Taught for one hour a week, the training emphasized the practical matter of how to follow the diets rather than any theoretical considerations about cardiovascular disease. The participants learned to read labels on food packages, distinguish between the types of fats and to cook with low-fat methods. They also received instruction on ways to add fiber to their diet, to eat healthy meals at restaurants, and to keep a record of what they consume.

Also during the ten weeks, the group attended small biweekly meetings to do exercises that tested their understanding of the lectures and to check their blood cholesterol levels. In addition, the participants met individually with a dietician for 30 minutes each week to set dietary goals and discuss ways to achieve them.

Sticking with a new diet isn't easy, no matter how motivated you are, admits Burgett. He says he's done pretty well but has eaten eggs benedict and some other things he knows better than to eat. For him, one problem is his working environment.

**"I love eggs benedict, but it's like eating nothing but a big bowl of cholesterol," says Burgett.**

"There are so many things that clutter up your diet, like birthdays," says Burgett. "Where I work, there are lots of them which means cakes, ice cream, doughnuts—lots of cholesterol, fats, etc. Someone will say 'Oh here, have some,' and the next think I know I'm eating it and then I remember that what I'm eating is basically lard."

This problem with dietary change is one that Garrity confirms and the reason he developed the education

program. High compliance is essential for the researchers to study the effectiveness of the diets. Because the participants are at home, not in an environment controlled by the researchers, the results are reflective only of how well the group follow their diet. Thus, a second important aim of this study is determining whether an equally high level of dietary compliance can be achieved by the HCF and AHA diets. This task won't be easy because the long-term following of a preventative or therapeutic regimen is notoriously poor.

"For the last thirty years in medical behavioral research literature, all sorts of compliance has been looked at," says Garrity. "For longterm, difficult dietary changes, compliance has been as low as 25 percent. To address this, we've incorporated a number of supports for the patients. We've tried to set it up to give the two diets the best possible chance to succeed."

The payoff for Burgett has been quick and encouraging. Like all the participants in the HCF and AHA groups, Burgett is having his cholesterol and other lipids measured again several times during the study. His first remeasurement showed a new cholesterol level of 215 mg.

"It's gotten easier with time," says Burgett. "It becomes like second nature. The philosophy I've adopted is one day at a time. You can't step out too far and say I will do this forever because then you're only setting yourself up to disappoint yourself. Some days it's hard to stick with the diet but I know this and I try to control myself."

In addition to monitoring the changes in the patients' cholesterol levels, Anderson and Garrity are also looking at other aspects of the serum lipids. The UK professors are watching the ratios of the various lipoproteins, the protein packages made in the liver to transport cholesterol and other lipids.

"It's conceivable that the total cholesterol levels won't change, but rather there will be a shift in the distribution and ratio of blood fats," says Garrity.

*Lissa D. Atkins '86 is a contributing writer to *Odyssey and the Kentucky Alumnus*.*

## Sample Menu for the HCF Diet

*This menu provides 2000 calories with 55% from carbohydrates, 25% from fat, 20% from protein, less than 200 milligrams of cholesterol, and includes 50 grams of fiber.*

### Breakfast

- 1/2 cup skim milk
- 3/4 cup oatmeal
- 2 oat bran muffins
- 2 tsp. margarine

### Lunch

- 2-3 ozs. charbroiled chicken
- 2 slices whole wheat bread
- 2 tsp. mayonnaise
- Lettuce and tomato
- Garden salad (lettuce & 1/2 cup vegetables)
- 4 tsp. French dressing
- Raw apple
- 6 almonds

### Supper

- Cottage cheese/pineapple salad (1/4 cup cc & 1/2 p)
- Kidney bean lasagna (3x4 sq. piece)
- Broccoli/cauliflower medley (1/4 cup of each veggie)
- 1/2 cup baked carrots
- Whole wheat roll
- 2 tsp. margarine

### Snack

- 1/3 cup all bran cereal
- 1 cup skim milk
- 3/4 cup blueberries

*To order Dr. Anderson's Life-Saving Diet book, call your local bookstore or send a check for \$6.95 plus taxes, if applicable, and \$1.00 for postage and handling to Price Stern Sloan, 360 N. La Cienega Blvd., Los Angeles, CA 90048. Or call 1-800-421-0892.*

# C L A S S N O T E S

## 1920s

**Louis Jesse '27** reports that his official title at the C & O Railroad in Lexington was "call-boy." He says, "That's not what you might think! When a freight train was ready to move out, I got on my bicycle and called the crew—an engineer, fireman, conductor and brakeman. There were not many telephones in the '20s."

## 1930s

**Ward "Butch" Burnette '38** is Kentucky's 29th Commissioner of Agriculture. A farmer in Fulton County, Burnette has served 12 years in the Kentucky Legislature representing the 1st House District. During his career as a state representative, he was known as the "legislative champion for agriculture" because of the numerous pro-agriculture bills he sponsored. He served as vice chairman of the Kentucky House Agriculture Committee and the Kentucky Task Force on Tobacco.

## 1940s

**Joshua Mott '48**, lives in Georgetown, S.C., where he retired after a career in the U.S. Foreign Service of the State Department's Agency for International Development. Mott retired in the early 1970s. His last assignment was with the Waccamaw Development Planning Commission. His previous assignments had included Italy, Ecuador, Iran, Africa, Vietnam, Alaska and Washington, D.C. Mott, who is also a retired major in the U.S. Marine Corps, has taught at several different universities and schools, including two months aboard a Navy destroyer off the coast of Lebanon. He also taught management and business administration at Myrtle Beach Air Force Base and at the University of South

Carolina in Georgetown at its technical center.

**Joseph I. Kramer '49, '50** is negotiating with movie producers to have his story brought to the screen. That's the word from producer Linda Yellen, who says, "Dustin Hoffman and I have been talking about the project for four years. . . . Dr. Kramer gave up a successful practice in suburbia to practice medicine on Avenue D, in the heart of the worst slums in New York; that was 18 years ago, and he's still there. It's an inspirational story."

## 1950s

**John Kuiper '50** is chairperson for the division of radio, TV, and film for North Texas State University in Denton.

**William R. Bennett '50** retired as district manager for South Central Bell in Shreveport, La., and is now with the development staff at Centenary College in Shreveport. A native of Bardstown, Bennett began his telephone company career in 1951.

**George R. Thomas '50** is a geologist for Columbia Gas Transmission Corporation in Paintsville.

**Ella Potter Martin Chapman '50** teaches English and journalism at the University of Missouri in St. Louis.

**Eugene C. Stevens '50, '52** is a structural engineer for the Jacobs Engineering Group in Lakeland, Fla.

**Bruce C. Cotton '52**, senior vice president of public affairs for Jerrico Inc., is president of the Kentucky Restaurant Association. He is responsible for the management of the association, recruitment, education programs and monitoring gov-

ernment actions and their effect on the industry. Prior to joining Jerrico in 1976, Cotton spent 14 years as vice president for development for Transylvania University, and then was with Terry Development for three years. He is married to the former **Mary Blanton Williams '53**. They are life members of the UK National Alumni Association.

**Samuel J. Basham Jr. '53**, assistant program manager-technical evaluation for the Battelle Memorial Institute, Office of Nuclear Waste Isolation, Columbus, Ohio, has been named a Fellow of the American Society of Mechanical Engineers. The Fellow grade is conferred on a member with at least 10 years of active engineering practice who has made significant contributions to the field.

**Elmer Boggs '53**, who retired in 1980 after 23 years as the McCreary County Extension Agent for Agriculture, is one of the top winners in *The Courier-Journal* forestry awards competition. Boggs purchased 73 acres of woodlands in McCreary County 21 years ago and has had a management plan since 1970. He has planted 6,500 white pine, shortleaf pine and loblolly pine on six acres of land and has planted 5,500 white pine and loblolly pine on bare spots in thinly stocked or open woodland areas. He established one of the first 4-H environmental education programs in the South and the first county 4-H forestry camp in Kentucky. He has been honored as Kentucky Conservationist of the Year, National Conservation Man of the Year, received the U.S. Forest Service's 75th Anniversary Appreciation Award, is an honorary Commissioner of Agriculture, honorary Secretary of State, received the Natural Resources Development Council Conservation Award of Merit and is a member of the American Tree Farm System.

**Harry Raplus '54**, and his wife, the former Helen Venn, celebrated their 56th wedding anniversary in June. He taught for 45 years in Illinois, Iowa, Georgia, Florida, Honduras, Central America, and most recently Upper Iowa University from which he retired in 1973 with the title of professor emeritus.

**Thomas F. Hutzler '54** is project manager, department of environmental engineering, for C. E. Williams & Associates in Indianapolis.

**Donald G. Marsh '55** is a pharmacist for Rite-Aid in Ashland.

**Joseph C. Thomas '55, '61**, dean of faculty and instruction at the University of North Alabama, has been recognized for his 25 years of "distinguished service" to education in Alabama. He is a life member of the UK National Alumni Association.

**James F. Hardymon '56, '58**, vice chairman and CEO of Emerson Electric Co., St. Louis, Mo., is on the Board of Governors of the National Electrical Manufacturers Association (NEMA), the nation's largest trade association for the manufacturers of electrical products. Hardymon has spent his entire career at Emerson Electric and Browning Manufacturing Company, a component manufacturer acquired by Emerson in 1968. From 1968 to 1976 he was successively assistant sales manager, vice president planning and development and executive vice president of

the Browning Division of Emerson. In 1976, he was named president of the Emerson Special Products Division moving in 1979 to group vice president of the Tool Group and president of the Skil Division. From 1983 until he was named chief operating officer in 1987, he was executive vice president, responsible for operations of more than half of Emerson's divisions. Hardyman is a life member of the UK National Alumni Association.

**H. Joseph Schutte '56** is president of Pharmicare Inc., a Kentucky firm that specializes in nursing home pharmacy care. He is a leader in pharmacy-related organizations at the national, state and local levels.

**Clara Steers Jones '57**, a second grade teacher at Heywood School, Troy, Ohio, has been named Educator of the Year by the Troy Jaycees. Jones was honored at the annual Civic Recognition Dinner at the Troy Holiday Inn.

**G. Emerson Jones '57** is director of the student loans program for the Kentucky Department of Agriculture. For the past six years, he has served as director of market development and director of market research for the department.

**John Y. Brown '57, '61, '81H** has been honored by the UK Center on Aging Foundation at a reception and dinner to announce a fund raising campaign for the study of Alzheimer's disease and related illnesses. Brown's \$1 million gift in 1973 stimulated the University's commitment to research and service programs for the elderly at the Center on Aging. UK President David P.

Roselle presented a Resolution of Appreciation to Brown, naming him the Foundation's first honorary board member.

**Don Poduska '57 and Donalene Sapp Poduska '58** live in Cleveland, Ohio, where, in addition to teaching, he is serving as chairman of the search committee for a new dean of the College of Arts and Sciences at John Carroll University. Donalene is in her second year as president of both Cleveland Heights-University Heights League of Women Voters, and the Embroiderers' Guild of Greater Cleveland. She is also a member of the Citizens Advisory Committee for the Community Development Block Grants in Cleveland Heights.

## 1960s

**Terence M. McKiernan '60** has retired as chief, construction-operations, North Pacific Division, U.S. Corps of Engineers. He was the Division Engineer's principal staff advisor on military and civil works construction, operations and maintenance matters for the Pacific Northwest and Alaska, and was a federal senior executive of the Department of the Army. He lives in Portland, Ore.

**Ted G. Wood '60** is president of Beecham Pharmaceuticals, U.S. Division. He is responsible for all activities of the prescription human and animal health business units in the United States. Wood began his career in 1962 with the Dow Chemical Company as a territory sales representative in Denver, Colo. He moved to Beecham in 1975 where he has held the positions of marketing manager, national sales manager, vice president of marketing and sales, and most recently executive vice president for all marketing and sales activities of the human and animal health division in the U.S.

**Coburn H. Gayle '60** is now executive assistant to the Kentucky Commissioner of Ag-

riculture. He oversees four divisions. He last served as the department's Division of Pest and Noxious Weed Control for 23 years.

**Brents Dickinson III '61** is vice president of GRW Engineers Inc. in Bowling Green.

**Roderick J. Tompkins '61** is managing partner of the Madisonville office of York, Neel & Company, CPAs. He is immediate past president of the Kentucky Society of Certified Public Accountants and is a former member of the Governing Council of the American Institute of Certified Public Accountants. Tompkins serves on the advisory boards of the UK school of accountancy and Madisonville Community College.

**William E. Brinkley '61** teaches agriculture at North Hopkins High School in Madisonville.

**John W. Fullenwider '62** is manager of pipeline safety for the Texas Gas Transmission Corp. He lives in Lewisport, Ky.

**Barney L. Hornback '62** is director of the Marketing Development Division of the Kentucky Department of Agriculture. He returned to the department after working as district sales manager for Landmark Genetics for the past three and a half years. Prior to that, Hornback was director of the department's Shows and Fairs Division for 12 years.

**Oscar Page '63, '67** is the sixth president of Austin Peay State University in Clarksville, Tenn. He had been provost

and vice president for academic affairs at Lander College, Greenwood, S.C. He has been on the staff of Lander since 1978. Prior to his appointment as Lander's vice president for academic affairs, Page served from 1971-1978 as a college dean at Wesleyan College, Macon, Ga. Previously, he taught history at the University of Georgia and Western Kentucky University. He is married to the former **Anna Laura Hood '65, '67**, an accomplished musician and published composer.

**Nona Stricker '65** is the executive director of the Greater Cincinnati Literacy Task Force. The Task Force is a consortium of 35 adult literacy providers working to coordinate a public awareness campaign on the adult literacy issue and to gather support for the independent literacy agencies active in the Greater Cincinnati area. A resident of Crestview Hills, Stricker has broad experience in the areas of education, mental health and community relations. A mother of three, she has a long list of volunteer service with Greater Cincinnati organizations. She is a life member of the UK National Alumni Association.

**Gary R. Smith '67, '69**, an Emory University School of Law professor whose specialties include legal issues regarding AIDS and other communicable diseases, has been appointed to a national AIDS advisory committee by Secretary of Health and Human Services, Otis R. Bowen.

**Paul E. Holcomb '68** is vice president for development and alumni relations at Old Dominion University in Norfolk, Va. Previously, he was director of development at the University of Alabama.

**Ken Hoskins '68**, former press secretary to Governor Martha Layne Collins, is now a senior public relations manager for Doe-Anderson Public Relations. Hoskins spent nine years as a writer and editor with The Associated Press. During the

1970 federal elections he represented the AP as a regional manager with News Election Service in New York, organizing the eight-state area for election returns. He returned to Louisville in 1974 to become an editor at *The Courier-Journal*. He was later named Bluegrass Bureau chief for the newspaper.

**James R. Boyd '69** is president of Ashland Exploration, Inc., in Houston, a subsidiary of Ashland Oil, Inc. He is also a vice president of Ashland Oil, Inc.

## 1970s

**Gary L. Schultz '70** is general counsel for Diamond-Star Motors Corporation. He is responsible for managing all legal matters for the new automaker. Prior to joining Diamond-Star, Shultz was a partner at the law firm of Shultz and Raymer in Bloomington, Ill. Diamond-Star Motors, located in Normal, Ill., is a 50/50 joint venture company formed by Chrysler Motors Corporation and Mitsubishi Motors Corporation.

**Rebecca Sue Aarvig Gray '70** is a math teacher at Male Traditional High School in Louisville.

**Robert B. McFarland '70** is a principal engineer with the Ford Aerospace Company in Hayward, Calif.

**Owen D. Hendrixson '71**, vice president, Mercantile Bank in St. Louis, Mo., is manager of the correspondent banking division of the corporate banking department. He joined Mercantile in 1982 as a group manager in the correspondent division. Prior to that he had 12 years of banking experience in Louisville. Hendrixson is married to the former **Marsha E. Nestor '70**. They are members of the UK National Alumni Association.

**Paula Maionchi '71, '87**, a physician and internal medi-

cine specialist, is on the staff of the Urgent Treatment Center in Lexington. She has served as chief of staff for Patty A. Clay Hospital in Richmond, as well as director of emergency room services. She also practiced internal and critical care medicine in Richmond for 11 years. She earned her law degree from UK in 1987. In addition, she is a lieutenant colonel in the U.S. Army Reserves.

**Ronald D. Herrington '71, '79** is a director of the Division of Traffic Engineers for the Lexington-Fayette Urban County Government.

**Condit F. Steil '72, '74** of the Trover Clinic Foundation and Caldwell County Hospital in Madisonville, has received a grant from the Diabetes Research and Education Foundation to develop and conduct training sessions to update pharmacists' knowledge about diabetes.

**Jon Dalton '72, '75**, Northern Illinois University vice president for student affairs, traveled to West Germany in early April. He is one of 20 U.S. college and university administrators selected to discuss educational, cultural and political issues involved in academic exchanges between the United States and West Germany.

**William P. "Pat" Morrison '72**, a Lubbock-based specialist with the Texas Agricultural Extension Service, has been honored by the Entomological Society of America as the nation's most outstanding Extension entomologist of 1987. He was cited for developing and conducting innovative educational programs to meet the diverse needs of agricultural clientele, including producers, crop consultants, students and agricultural suppliers.

**Lina Jean Trosper Armstrong '72** is sales manager for WFOX-FM in Atlanta. She was formerly sales manager for RKO/Republic Radio in Atlanta for five years. Prior to that, she worked for WGST,

WPCB and Georgia Radio News Service for six years in both local sales and programming.

**Michael S. Tierney '73** is the assistant sports editor for the *Atlanta Constitution*. He lives in Decatur, Ga.

**Michael E. Tobbe '74**, a Coast Guard Lt. Cmdr., is on duty at Ninth Coast Guard District, Cleveland, Ohio.

**Roger Nesbitt '74** is a principal assistant to the Kentucky Commissioner of Agriculture and is the department's legislative liaison. He is working with marketing and promotional programs. Prior to joining the department, he was farm editor for the *Lexington Herald-Leader*. He has also been a reporter for *The Courier-Journal* and is the recipient of several Kentucky Press Association awards for news and feature writing.

**Susan Ehrman Frazier '74** is the development associate at Southwest Texas Methodist Hospital in San Antonio. She assists the Methodist Hospital Foundation in fund raising for facilities and equipment. Previously, she worked at Ray Ellison Homes in San Antonio, where she was senior advertising coordinator. Before that, she was director of personnel services and also promotion director for the Lexington Herald-Leader Co., as well as former membership manager for the Lexington Chamber of Commerce.

**Robert F. Curtis '75**, a major in the U.S. Marine Corps, participated in exercise Spanish Phiblex 2-87 while serving with 22nd Marine Amphibious Unit, Camp Lejeune, N.C. He was part of a six-month deployment to the Mediterranean Sea, conducting operations with NATO allies.

**Ronald D. Hawkins '75** is assistant editor for *Television Digest* in its New York City office. He lives in Weehawken, N.J.

**William D. Falvey '75**, president of Fessel, Siegfried & Moeller Public Relations, has achieved accreditation status with the Public Relations Society of America. A member of the Bluegrass Chapter of PRSA since 1985, Falvey joins approximately 31 public relations professionals in the Louisville area and 4,000 nationwide who have earned accreditation.

**Robert F. Curtis '75**, a major in the Marines, participated in Galera 88 while deployed to the Mediterranean with the 22nd Marine Expeditionary Unit, Camp Lejeune, N.C.

**Karen Marple '76, '82** is corporate counsel at Jerrico Inc. She is responsible for legal matters concerning more than 1,450 Long John Silver's Seafood Shoppes nationwide. She was most recently an attorney with the Lexington office of the law firm of Stites & Harbison. Marple is a member of Phi Delta Phi legal fraternity.

**Michael Yates '76** is eastern division real estate asset manager for Jerrico Inc. He coordinates the purchase or lease of real estate for all Long John Silver's Seafood Shoppes east of the Mississippi River. Yates was most recently an adjunct professor of real estate law at Sullivan Junior College of Business in Lexington. Before joining Sullivan, he had a private law practice in Hickman, where he also served as city attorney. He also served as general legal counsel and worked in the asset management department of W.A.B.C.O. Fluid Power Division in Lexington.

**Gary M. Raymer '76** is a construction engineer for the Kentucky Department of Highways. He lives in Leitchfield.

**Terry McWilliams '77** is an account manager with The Wenz-Neely Company, working with the firm's financial and investor relations group. He was a reporter for the *Middlesboro Daily News* and the *Kingsport (Tenn.) Times-News*

before joining the *Knoxville Journal* in 1980. He was a correspondent for *The Wall Street Journal* and later worked for a Nashville financial consulting firm. Immediately before joining Wenz-Neely, McWilliams was business writer for the *Asbury Park (N.J.) Press*.

**Hobart R. Jarvis '77** is now a Certified Management Accountant. He has successfully completed a comprehensive examination on accounting and related subjects and satisfied the required two years of management accounting experience. He is manager of general accounting for NCR in Corbin.

**Ceal Barry '77** has been at the helm of the University of Colorado women's basketball program for five years. Previously Barry spent four years as the head coach at the University of Cincinnati. She is the only Kentucky alumnus that is a head coach at the Division I intercollegiate level. She currently serves on the Board of Directors of the Women's Basketball Coaching Association, and was named the 1986 Colorado Coach of the Year.

**Robert Harrett '77** is an architect with the design and construction department of Humana, Inc., Louisville. He is currently manager of design of hospital facility development in their Southeast region.

**Allen K. Montgomery Jr. '78, '85** is vice president and corporate legal counsel for Baptist Hospitals, Inc. As chief legal officer for the multi-hospital organization, Montgomery is responsible for all legal matters of the corporation, its operating divisions, and its affiliated corporations. Prior to joining

BHI in 1986, he was associated with Evans, Kitchell & Jenckes, a law firm in Phoenix, Ariz.

**Thomas L. Rouse '78** is president-elect of the Northern Kentucky Bar Association and will serve as president in 1989. He has served as a director of the association since its formation. He was president of the Kenton County Bar Association in 1984. Rouse is a member of the Covington firm of Spalding and Philipps and has been practicing law for nine years.

## Corrections

Betty Moore Horn Sandler '69 and Doris M. Vazmina were incorrectly listed in the Necrology section of the last magazine. Mrs. Sandler lives in Arlington, Va. Mrs. Vazmina lives here in Lexington. It was Mrs. Vazmina's husband, Ernest R. Vazmina, who passed away in March 1987. We apologize to them, their family and friends for the error.

# Presidential Perspective

## . . . my first year on the job

Just recently I participated in the annual summer workshop for alumni club presidents and national board members, and I was asked to give a "state of the University" message.

The assignment caused me to look back on my first year at UK, and what I saw were some things which provide an optimistic outlook for the University in the years ahead.

Here are a few of them:

- **The quality of UK's student body continues to improve steadily each year.** The next entering class at UK will again have average ACT scores higher than the class a year before. Increases in quality of our freshmen have been evident since 1983 when a selective admissions policy was instituted by UK.

- **Applications by students desiring to attend UK are running at a higher rate than the year before.** About 11,000 students have applied for the freshman class—about a thousand more than last year. Many students, it seems, see an excellent educational opportunity at UK and want to take advantage of it.

- **UK faculty continue to garner top national honors.** For example, Dr. Robert Shepherd from plant pathology was elected to the National Academy of Science, the only Kentucky resident ever so honored. . . . Dr. Graeme Fairweather of our mathematics department was named a Fulbright Fellow. . . . Dr. Anthony DeMaria from our Medical Center is an eminent cardiologist and was just recently elected president of the American College of Cardiology. . . . And from the administrative ranks of the University, Dr. Ron Horvath of

Jefferson Community College was named one of the Top 50 community college presidents in the country by the American Association of Community and Junior Colleges.

- **Preliminary figures show that grants and contracts have increased again.**

The total is projected to be up 10 percent at about \$54 million for the past year, solid evidence of the outstanding faculty we have. A \$20 million investment in new research equipment, made possible by the 1986 General Assembly, also contributed to the success of our search for new research dollars.

- **We made progress on our computing and communications capabilities, and brought a new "supercomputer" on line.** Not only will such progress help our research efforts, but we also will push these new computing opportunities right down into the undergraduate level. That way, students can take advantage of this marvelous new technology at UK.

- **Internally, we offered for the first time free tuition for employees to take classes at the University.** This was well received and hundreds of employees signed up for classes for the first time.

- **In athletics, there were many successes.** Our total athletics program was the fourth best in the Southeastern Conference.

Our football graduation rate was among the highest in the nation with 19 of 21 of the 1982 recruits having received their degrees. And more Wildcats were named to the Academic All-Southeastern Conference Honor Roll than any other team in the conference.

- **We came through the recent legislative session with a better result than had been feared.** We deeply appreciate that members of the legislature, alumni and other friends of UK worked to make possible budgetary gains for the university. We look forward to working with Governor Wilkinson toward further budgetary gains.

In summary then, we look back on the past year with satisfaction, and the "state of the University" is good. To be sure there were some problems along the way. There also will be problems in the future.

Through all problems, however, we will be searching for opportunities to enhance qualitative growth at UK. We will continue to work toward our goal of making the University of Kentucky an institution recognized nationally for its research, scholarship, and graduates.

And if I may close on a more personal note, Louise and I would like to thank all of our alumni and friends for their many offers of help and other kindnesses.

We look forward to enjoying the future years with you.

*David Poole*

**1938 - THE BIG 50TH!**  
**1943-1948-1953-1958-1963-1968**

## EXHIBITION SCHEDULE

# UNIVERSITY OF KENTUCKY ART MUSEUM

### THE BEST OF AMERICAN ILLUSTRATION

September 4 - October 16, 1988

The golden age of American book and magazine illustration in seventy-five works from the collection of the Delaware Art Museum. Included are drawings and watercolors by John Held, Maxfield Parrish, Howard Pyle, John Sloan, Frank Schoonover, Andrew and N.C. Wyeth and others.

The exhibition will open with a lecture and public reception at 3:00 PM on Sunday, September 4.

### THOMAS HART BENTON: THE ORIGINS OF COUNTRY MUSIC

October 30 - December 4, 1988

In 1975 Thomas Hart Benton, the great American regionalist artist, completed his last commission: a six-by-ten-foot mural depicting in lively detail the varied sources of American country music. This mural plus thirty-five preliminary sketches and rare photographs of Benton at work will be lent to the Museum from the Country Music Foundation in Nashville.

### JOHN TUSKA: A 25-YEAR RETROSPECTIVE

January 8 - February 19, 1989

This comprehensive exhibition will feature a selection of seventy-five outstanding works in bronze, paper, clay, wire, wood, and wax by one of Kentucky's most enduringly popular artists. To do full justice to the range of Tuska's achievement, four other Fayette County galleries will join with the Museum to present simultaneous smaller exhibitions of the artist's work.

### ANSEL ADAMS: IMAGES OF AMERICA, 1927-1960

March 4 - April 22, 1989

No other photographer has been as successful as Ansel Adams in capturing the beauty and monumentality of the American landscape. Included in the exhibition are thirty-two of Adam's most celebrated images of the American west. The exhibition is a program of the Mid-America Arts Alliance.
