### FOREWORD

In this bulletin there has been assembled considerable information on Kentucky high schools. Every high school reported to be in operation in the state has been included.

The official rating by the State Board of Education given the high schools listed herein was made on the recommendation of "The Commission on Secondary Schools of the Kentucky Association of Colleges and Secondary Schools". This Commission is composed of the following members:

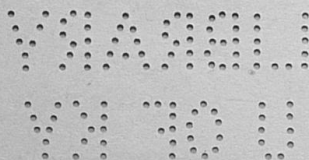

P. E. Barker	C. I. Henry	Allen Puterbaugh
R. V. Bennett	Sister M. Hilda	W. S. Taylor
G. C. Burkhead	R. E. Jagers	Hilda Threlkeld
R. A. Edwards	M. E. Ligon	S. B. Tinsley
E. E. Gabbard	W. R. Nelson	J. D. Williams
Mark Godman	V. F. Payne	Sister Agatha Young
L. C. Henderson	Lucy Peterson	

This compilation has been made by Mark Godman and L. N. Taylor, Public School Supervisors.

The great demand, in the past, for copies of a similar publication indicates that the information contained herein will prove valuable both to school officials and citizens generally. I recommend a careful study of its contents.

H. W. PETERS,  
*Superintendent Public Instruction*

## ORGANIZATION AND CLASSIFICATION OF KENTUCKY HIGH SCHOOLS

**Schools.** There are 818 high schools in Kentucky. This number is in contrast to 833 in operation last year and 848 year before last. Of the 818 high schools operating this year, 486 are county high schools for white pupils and 23 are county high schools for colored. In the independent districts there are 225 high schools, 170 of which are operated for white pupils and 55 for colored. Private secondary schools number 77, one of them being for colored pupils. In addition, we have 1 municipal and 6 state high schools.

Kentucky has several types of high school organization. Of the 818 high schools, district, private, state and municipal, 339 are organized as 6-year high schools (grades 7-12), 363 are of the traditional type (grades 9-12), 9 are senior high schools (grades 10-12), 31 are junior high schools (grades 7-9), 18 are high schools organized only through the 11th grade and 58 are schools that offer work through the 10th grade only. One of the tables that follow will illustrate how these various organizations are distributed as to county, independent, private, state and municipal high schools.

**Pupils.** The total high school enrollment of the state is 124,504. The public white high schools, district, municipal and state, enroll 106,799 of this number. The public colored high schools enroll 8,711 while the private high schools enroll 8,994. In connection with the total high school enrollment, it should be noted that 29,704 are enrolled in the 7th and 8th grades of the high schools which include these grades in their organization. This means that the enrollment in grades 9, 10, 11 and 12 amounts to 94,800.

**Improvements.** Kentucky is a state of many small high schools. It has large areas in which road conditions have made transportation unavailable. Naturally, county school authorities in developing their high school programs in the past thought almost entirely in terms of making high school advantages *available* to their boys and girls. Now, however, since roads are improving and school buses are becoming more common, they are not only thinking in terms of the availability of high school opportunities but they are also thinking in terms of making these opportunities commensurate with those found in large centers of population. Gradually but slowly, county school authorities and patrons of the small schools are beginning to realize that

improved means of transportation as well as the demands for a more extensive curricula to meet the needs of those who will never go to college, require larger high schools with more extended and enriched curricula offerings. Economy of high school operation also makes a similar demand. Hence, we note that county boards of education are more and more combining their small high schools at logical school centers and furnishing transportation. This is proving to be less expensive than the maintenance of many small high schools and is, at the same time, providing the pupils with a broader and richer program of work. With the further improvement of roads and increased transportation, the high school centers finally determined upon will greatly increase in enrollment and offer not only the traditional college entrance subjects but also such practical and enriching courses as commercial work, vocational agriculture, home economics, music and art. Such courses are designed to prepare one to enter directly into life activities as well as to enter college.

**County Studies.** Fortunately, county boards of education are being assisted in this work through the series of studies of attendance areas now being carried on in the state with funds furnished by the Federal Government. The findings and recommendations of these studies, based upon an intensive and comprehensive survey of local school conditions, are giving county school authorities facts and sound judgments rather than opinions and sentiments as a basis for attacking the problem of reorganizing their high school program in line with modern demands. If county school authorities will map out their future program for school development in line with the recommendations of these surveys, it will not be many years before many counties can boast of a high school program that is commensurate with the best.

It is now generally agreed that in order for a high school to meet modern needs it should have an enrollment of at least 200 pupils and employ at least seven teachers, exclusive of the principal. With such an organization, the high school should be able to offer such courses as commercial work, home economics, vocational agriculture, etc., in addition to the traditional academic subjects. As an illustration of how far we are from that goal, it should be observed that out of 741 public high schools we have 600 which do not meet this standard. Only 151 high schools of the 818 in the state, public and private, enroll as many as 200 pupils.

**Accrediting.** Colleges and associations of colleges began the accrediting of high schools to which they looked for students. By this means the curricula of the high schools were made to articulate

satisfactorily with those of the colleges, presumably to the advantage of the students both before and after passing from high school into college. The pioneer high schools were mainly private high schools, with no close supervision by the state, and this inspection and accrediting afforded them a form of supervision. With a phenomenal increase in the number of public high schools and in the proportion of pupils served by them (now 92.8%), and with recognition of the duty of the state to supervise the administration of these high schools together with the general service (grades 1-12) of their respective districts, the duty of supervision by inspection and accrediting has been assumed by the state, which has essential relations with the boards of education carrying on these schools.

With the freest cooperation and advice of the accrediting committee of the Association of Colleges and Secondary Schools, the State Board of Education considers the entire program of service maintained by each board of education in the light of its financial and geographic conditions, and officially accredits its schools. In county school systems attention will not continue to be confined to the last four grades of individual schools. A more comprehensive view will prevail. That view will include all the children in all the communities of the county, and the program must provide for them. It may be an **A** program, or it may be a **B** program, according to the ability of the county to maintain it, and the entire coordinated program will be considered as a unit.

**Results by Counties.** Our common school offering is a twelve-year, twelve-grade course, usually organized with eight grades in the elementary and four in the high school.

Our school census covers a range of twelve years, six to eighteen, corresponding to the twelve grades of our common school course.

Since eight of these years are commonly spent in the elementary grades and four of them in the high school, it is reasonable to conclude that about two-thirds of the children in our school census should be enrolled in the elementary grades and about one-third of them in high school grades.

The number actually enrolled in the high school grades of our public and private schools is given county by county in the following table. No county has even approximately thirty-three per cent of its school census in its high schools. The percentages vary from the low limit of 3.3% in one county to the relatively high figure of 23.7% in another.

In the former county one-tenth of the children that are of age

to be in high school actually get to attend. In the latter, seven-tenths of the children that are of age to be in high school are actually there.

It is only fair in connection with this comparison to observe that the schools are now maintained mainly on the basis of local taxation, and that these two counties are not equally able to maintain their schools. The former of them has an assessed valuation of \$381 per census child subject to school tax, while the latter has \$3,927, and another county has above \$8,000.

These data as given below, county by county, include in each case all the geographical county and all the children attending high schools of any kind within these counties—county, city, public, private, white and colored.

**Inequalities.** The tabulation of high school results shown county by county presents a picture of inequalities, one county giving high school education to only one-seventh as large a per cent of its pupils as another county does. The same table shows that this county of lowest school result (as measured by percentage of children in high school) is low in wealth back of each child, the per-pupil wealth varying from county to county in a range of more than twenty to one.

About forty per cent of the program of common school education is financed by the state thru its per capita school fund, and about sixty per cent by local (county or district) taxation. The state financed part is a well-equalized program of education, as far as it goes. The locally financed part is unequalized, discriminating among children according to where they live and discriminating among school taxpayers in the same way. If the state per capita were raised to finance the major part of the program, school service for the children would be proportionately equalized and local school tax rates reduced to a minimum. Under this plan the short seven-month term which now prevails in the rural schools of eighty-one counties will yield to a standard term of at least eight months and carry larger numbers of children into high school.

The data found in the tables that follow should give a fairly clear picture of certain pertinent information regarding our high schools. These data have been gathered from the *Annual High School Reports* sent to the State Department of Education at the beginning of the school year.

**TABLE I.**  
High School Enrollments—Classified by Grades and Types of Control.

Enrollment by Grades	County Districts		Independent Districts		Private Secondary		State and Municipal		Total
	White	Colored	White	Colored	White	Colored	White	Colored	
7th Grade	6,253	102	7,684	1,299	111	0	192	0	15,641
8th Grade	5,253	91	7,168	1,193	156	0	202	0	14,063
9th Grade	15,553	360	14,089	1,917	2,572	17	268	0	34,776
10th Grade	9,916	212	10,621	1,458	2,228	17	194	0	24,646
11th Grade	8,019	109	8,787	1,107	1,985	11	162	0	20,180
12th Grade	5,586	93	6,696	770	1,887	10	156	0	15,198
Total	50,580	967	55,045	7,744	8,939	55	1,174	0	124,504

#### Facts in Connection with Table I.

- (1) The number of all children in grades 9-12 is 12.02% of the number (783,394) in the school census (age 6 to 18 years).
- (2) The number of white children in grades 9-12 is 12.15% of the number (725,336) in the school census.
- (3) The number of colored children in grades 9-12 is 10.47% of the number (58,058) in the school census.
- (4) The number of all children beginning the twelfth grade is 43.1% of those beginning the ninth grade.
- (5) The number of white children beginning the twelfth grade is 43.4% of those beginning the ninth grade.
- (6) The number of colored children beginning the twelfth grade is 38.1% of those beginning the ninth grade.

**TABLE II.**  
Size and Number of High Schools.

Size Based on Enrollment	County Districts		Independent Districts		Private Secondary		State and Municipal		Total
	White	Colored	White	Colored	White	Colored	White	Colored	
Below 50 .....	108	16	2	18	17	0	1	0	162
50-99 .....	180	6	30	14	31	1	0	0	262
100-199 .....	148	1	55	16	18	0	5	0	243
200-499 .....	49	0	56	4	8	0	1	0	118
500 and above	1	0	27	3	2	0	0	0	33
<b>Total</b> .....	<b>486</b>	<b>23</b>	<b>170</b>	<b>55</b>	<b>76</b>	<b>1</b>	<b>7</b>	<b>0</b>	<b>818</b>

Eleven of the high schools enrolling above 500 actually enroll 1,000 or more pupils each. The enrollment of one of them nearly reaches the 3,000 mark.

**TABLE III.**  
Average Number of Pupils Per Teacher in High Schools of Different Size.

Size Based on Enrollment	County Districts		Independent Districts		Private Secondary		State and Municipal	
	White	Colored	White	Colored	White	Colored	White	Colored
0-49 .....	18	16	16	13	7	---	8	---
50-99 .....	22	23	22	24	14	14	---	---
100-199 .....	26	31	26	23	19	---	17	---
200-499 .....	29	---	26	23	23	---	18	---
500 and above	26	---	27	25	30	---	---	---

**Teachers.** It is interesting to observe that in the smaller schools with the minimum curriculum there are but few pupils to the teacher, while in the larger schools with their more liberal offerings there are more pupils to the teacher.

There are 5,080 teachers employed in all types of high schools, public and private. Practically all of them are graduates of standard four-year colleges. Last year all of our high school teachers were graduates of standard four-year colleges except 308. This year the number of non-college graduates is so small that we have ignored this item in compiling high school data.

Of the 5,080 teachers employed in the 818 high schools, 4,183 are employed in public white high schools and 381 are employed in public high schools for colored pupils. The private high schools employ 516 teachers.

The average number of pupils per teacher in the public white high schools is 26. In the public colored high schools it is 23, and in the private high schools it is 17.

TABLE IV.  
Types of High School Organizations and Number of Each.

Types of Organizations	County Districts		Independent Districts		Private Secondary		State and Municipal		Total

\* Interpretation of High School Ratings.

A—Accredited through the entire high school course (through grade twelve).

B—Accredited through the entire high school course (through grade twelve).

11 Gr.—Accredited through grade eleven.

10 Gr.—Accredited through grade ten.

9 Gr.—Junior high school—recognized through grade nine.

T—This initial when attached to the designation of any rating indicates that such rating is given in the face of some deficiency, that it is temporary for this year only, and that the school should be discontinued at the close of this school year or reorganized in full compliance with regulations for accrediting.

E—This initial suggests that an emergency is recognized to exist that may justify the operation of the school even with an observed shortage in the number of pupils or of teachers.

U—Unaccredited.
