

The following table shows the results of the survey. The data indicates that the majority of respondents are satisfied with the current state of affairs, although there is a significant portion who are dissatisfied. The reasons for dissatisfaction are primarily related to the quality of service and the cost of the product.

The data also shows that there is a strong correlation between the quality of service and the cost of the product. As the quality of service improves, the cost of the product also tends to increase. This suggests that there is a trade-off between quality and cost in this market.

Overall, the survey results indicate that there is a need for improvement in the quality of service and the cost of the product. This could be achieved through a variety of measures, such as increasing the quality of the raw materials used, improving the manufacturing process, and reducing the overhead costs of the business.

The survey also identified several key areas for improvement, including the need for better customer service, more consistent product quality, and a more competitive pricing strategy. These findings provide a clear roadmap for the company to follow in order to improve its performance and increase its market share.
