

Kentucky Agricultural Experiment Station

UNIVERSITY OF KENTUCKY

Inspection, Certification, and Transportation of Nursery Stock in Kentucky with a Brief Report for the Year Ended June 30, 1939

W. A. PRICE and HOWARD G. TILSON

Many inquiries are received each year from nurserymen and others interested in the sale of plants. To answer these questions, the Kentucky Agricultural Experiment Station thru its Entomologist publishes each year an informal bulletin. It contains information regarding the interstate movement of nursery stock; procedure necessary to obtain licenses; discussions of some recently introduced insect pests and diseases; and lists the licensed nurserymen, dealers, and agents.

Notice to Nurserymen

If your name, address, acreage, and kind of stock are not correctly or completely printed in this bulletin, please notify us in order that we may have the proper data for future publications and for our office records. All Kentucky certificates and permits automatically expire June 30th of each year. Renewals should be made promptly if maximum benefits are to be received.

Inspection and Certification of Nurseries, Dealers, and Agents

The Nursery Inspection Law of Kentucky provides authority for inspecting nurseries and for issuing permits to nursery-stock dealers and agents. In order to sell or offer for sale nursery stock in Kentucky every nursery or grower of nursery stock must obtain a certificate of inspection. These certificates are issued only to those nurserymen whose stock is found apparently free from dangerous pests or to those who take the necessary steps to clean up pests according to the recommendations of the State Entomologist. Any person not regularly receiving inspection and who anticipates offering nursery stock for sale should apply for inspection to the State Entomologist, Kentucky Agricultural Experiment Station, Lexington, Kentucky, not later than June 1st. All **dealers** who buy nursery stock and offer it for resale and all **agents** who offer for sale nursery stock of some particular nursery or stock on consignment should apply for the necessary blanks to obtain a dealer's or agent's permit. Since the Nursery Inspection Law is designed to prevent the spread of dangerous pests within the State as well as to prevent the introduction of pests into the State, it is just as essential to obtain inspection for nursery stock that is to be given away or sold locally as for that which is to be offered for shipment to other states.

Definition of Nursery Stock. All trees, shrubs, and vines, including ornamentals, whether nursery grown or native; roses; strawberry, raspberry, and blackberry plants; herbaceous perennial plants and roots; ornamental bulbs, corms, and tubers; and any other plants which may serve as a medium for disseminating injurious insects or plant diseases are classed as nursery stock. Because of the comparatively little pest risk, annual flowering plants, greenhouse, and household potted plants, and garden vegetable plants are not classed as nursery stock. Sweetpotato slips heretofore considered as nursery stock and subject to regulation are now removed from this list.

Postal Regulations Relating to Nursery Stock by Parcel Post. Under paragraph two, section 595, Postal Laws and Reg-

ulations, the requirements for shipping plants are stated as follows: Nursery stock, including all field-grown florists' stock, trees, shrubs, vines, cuttings, grafts, scions, buds, fruit pits, and other seeds of fruit and ornamental trees or shrubs, and other plants and plant products for propagation, except field, vegetable, and flower seeds, bedding plants, and other herbaceous plants, bulbs, and roots, may be admitted to the mails only when accompanied by a certificate from a state or government inspector to the effect that the nursery or premises from which such nursery stock is shipped has been inspected within a year and found free from injurious insects and plant diseases, and the parcel containing such nursery stock is plainly marked to show the nature of the contents and the name and address of the sender.

The following states have established terminal inspection under section 596 of the Postal Laws and Regulations, and any package of nursery stock addressed to any place within these states must be plainly marked "so that its contents may be readily ascertained by an inspection of the outside thereof": Arizona, California, Florida, Idaho, Louisiana, Mississippi, Montana, Oklahoma, Oregon, Utah, Washington, the territories of Hawaii and Puerto Rico, and the District of Columbia.

Requirements for Shipping to Other States. The regulations for shipping nursery stock into other states are constantly undergoing revision. Also, state and federal quarantines are being changed as the insects and plant diseases shift from time to time. A short summary of the important requirements for shipping nursery stock into other states is given below.

To ship into the following 35 states requires the filing of a duplicate inspection certificate with the proper official of the respective state:

Alabama	Iowa	Missouri
Arkansas	Kansas	Nebraska
Connecticut	Kentucky	New Jersey
Idaho	Louisiana	New Mexico
Florida	Maryland	North Carolina
Georgia	Michigan	Ohio
Illinois	Minnesota	Oklahoma
Indiana	Mississippi	Pennsylvania

Rhode Island
South Carolina
Tennessee
Texas

Utah
Vermont
Virginia
Washington

West Virginia
Wisconsin
Wyoming

The filing of bond is required in five states:

	Size of Bond
Idaho (Only if sales exceed \$200 annually)	\$1,000
Louisiana	1,000
Montana	1,000
Wyoming (For those who promise service after planting)	500

Nevada requires a special certificate, stating stock was inspected immediately prior to shipment.

In addition to filing duplicate inspection certificates, the following requirements are summarized:

State	Registration Fee	Agent's Fee	Tags Required on Shipment
Alabama	\$10.00—\$1.00 for strawberry growers	\$1.00	Alabama permit tag. Ky. inspection certificate
Arkansas	\$5.00—Reciprocal if no agents	\$1.00	Arkansas tags—2c each Ky. inspection certificate
Arizona	None	None	Ky. inspection certificate
California	None	None	Ky. inspection certificate
Colorado	None	None	Ky. inspection certificate
Connecticut	None	None	Ky. inspection certificate
Delaware	None	None	Ky. inspection certificate
Florida	None	None	Ky. inspection certificate
Georgia	\$5.00	\$1.00	Georgia tags \$2.00 per 100
Idaho	\$5.00 to \$15.00 if sales exceed \$200	\$1.00	Ky. inspection certificate
Illinois	None	None	Ky. inspection certificate
Indiana	None	\$1.00	Ky. inspection certificate
Iowa	Reciprocal	None	Ky. inspection certificate
Kansas	Reciprocal	Reciprocal	Kansas permit tag. Ky. inspection certificate
Kentucky	\$5.00	\$5.00	Ky. inspection certificate
Louisiana	None—\$1,000 bond	None	Louisiana tag—50 tags 50c
Maine	None	\$5.00	Maine permit tag—No cost
Massachusetts	Reciprocal	Reciprocal	Ky. inspection certificate
Maryland	None	None	Ky. inspection certificate
Michigan	\$15.00 (Only when agents)	\$1.00	Ky. inspection certificate
Minnesota	Reciprocal	None	Ky. inspection certificate
Mississippi	Reciprocal	Reciprocal	Miss. permit tag—1 to 25, 2c. Ky. inspection certificate
Missouri	None	None	Ky. inspection certificate
Montana	\$25.00	None*	Ky. inspection certificate
Nebraska	\$10.00†	\$1.00	Ky. inspection certificate
New Mexico	\$10.00	\$25.00	New Mexico permit tag—No cost; Ky. inspection certificate
Nevada	None	None	Ky. inspection certificate
New Hampshire	None	None	Ky. inspection certificate
New Jersey	None	None	Ky. inspection certificate
New York	None	None	Ky. inspection certificate

State	Registration Fee	Agent's Fee	Tags Required on Shipment
North Carolina	Reciprocal	None	Ky. inspection certificate
North Dakota	Reciprocal	None	Ky. inspection certificate
Ohio	None	\$1.00	Ky. inspection certificate
Oklahoma	\$10.00	\$1.00	Oklahoma permit tag— No cost; Ky. inspection certificate
Oregon	None	\$1.00	Ky. inspection certificate
Pennsylvania	None	\$1.00	Ky. inspection certificate
Rhode Island	None	\$1.00	Ky. inspection certificate
South Carolina	None	\$1.00	S.C. tag—1 to 5, 5c each; 15 to 50, 3c each; 100, \$2.00
South Dakota	\$1.00	\$1.00	Ky. inspection certificate
Tennessee	Reciprocal	Reciprocal	Ky. inspection certificate
Texas	\$5.00	None	Texas permit tag. Ky. inspection certificate
Utah	\$10.00	None	Ky. inspection certificate
Vermont	None	None	Ky. inspection certificate
Virginia	\$10.00†	\$1.00	Ky. inspection certificate
Washington	\$5.00 nurserymen; \$10.00 dealers	None	Ky. inspection certificate
West Virginia	\$20.00	None	W. Va. permit tag, 100, \$2.00
Wisconsin	Reciprocal	None	Ky. inspection certificate
Wyoming	\$15.00—\$500 bond	None	Wyoming permit tag. Ky. inspection certificate

* Montana—No agent's fee if nursery holds license. \$25.00 if nursery has no license.

† Nebraska—Registration fee \$10.00 from states charging fees. Other states no fee.

‡ Virginia—After September 1, 1939, this fee is abolished. Virginia tag must be attached to all nursery stock coming into the state.

Federal and State Quarantines

Every state in the United States as well as the Federal government has the authority to establish quarantines and designate any area in this country or any other country as the regulated area or areas against which the quarantine is promulgated. It is the usual practice for the authorities setting up the quarantine to name the plant pest against which protection is desired and to designate the area in which the pest is found as the regulated area, as well as to specify conditions under which plants and other material may move from the regulated area into or thru non-regulated areas.

More than 200 such state quarantines as well as several Federal quarantines are now in effect. As yet Kentucky has not been included in the regulated area of any of the Federal quarantines but several states have included this state as part of the regulated area in their respective quarantines. For this reason, Kentucky nurserymen, florists, and others who con-

template shipment of plants or plant materials interstate should consult the proper authority before such shipment is made. Failure to do so may result in delay of delivery, return of shipment at expense of shipper, or even complete destruction of the shipment when it is found to have been shipped in violation of the quarantine regulations of the state of destination. For the convenience of shippers of plant materials, a list of officers in charge of inspection and regulations in the various states is given below.

Alabama	G. L. Harris, Acting Chief, Division of Plant Industry, Department of Agriculture, Montgomery.
Arizona	Oscar C. Bartlett, State Entomologist, Commission of Agriculture and Horticulture, Phoenix.
Arkansas	Paul H. Millar, Inspector, State Plant Board, Little Rock.
California	A. C. Fleury, Chief, Bureau of Plant Quarantine, Department of Agriculture, Sacramento.
Colorado	F. Herbert Gates, State Entomologist, 20 State Museum Building, Denver.
Connecticut	Roger B. French, State Entomologist, Agricultural Experiment Station, New Haven.
Delaware	Ralph C. Wilson, Secretary, State Board of Agriculture, Dover.
Florida	J. C. Goodwin, Nursery Inspector, State Plant Board, Gainesville.
Georgia	M. S. Yeomans, State Entomologist, State Capitol, Atlanta.
Idaho	W. T. Callender, Director, Bureau of Plant Industry, Department of Agriculture, Boise.
Illinois	H. F. Seifert, Chief Plant Inspector, Room 300, Glen Ellyn State Bank Building, Glen Ellyn.
Indiana	Frank N. Wallace, State Entomologist, Department of Conservation, Indianapolis.
Iowa	Carl J. Drake, State Entomologist, Ames.
Kansas	George A. Dean, State Entomologist, Kansas Entomological Commission, Manhattan.
Kentucky	W. A. Price, State Entomologist, Agricultural Experiment Station, Lexington.
Louisiana	W. E. Anderson, State Entomologist, Department of Agriculture, Baton Rouge.
Maine	Stanley L. Painter, Horticulturist, Department of Agriculture, Augusta.
Maryland	E. N. Cory, State Entomologist, Board of Agriculture, College Park.
Massachusetts	R. Harold Allen, Director, Division of Plant Pest Control, Department of Agriculture, Statehouse, Boston.

Michigan	C. A. Boyer, Orchard and Nursery Inspector, Department of Agriculture, Lansing.
Minnesota	A. G. Ruggles, State Entomologist, University Farm, St. Paul.
Mississippi	R. P. Colmer, Chief Inspector, State Plant Board, State College P. O.
Missouri	J. Carl Dawson, State Entomologist, Department of Agriculture, Jefferson City.
Montana	George L. Knight, Chief, Horticultural Division, Department of Agriculture, Missoula.
Nebraska	L. M. Gates, Inspector, Plant Industry, Department of Agriculture and Inspection, Lincoln
Nevada	George G. Schweis, Director, Division of Plant Industry, Department of Agriculture, Box 1027, Reno.
New Hampshire	W. C. O'Kane, State Nursery Inspector, State Department of Agriculture, Durham.
New Jersey	Harry B. Weiss, Chief, Bureau of Plant Industry, Department of Agriculture, Trenton.
New Mexico	R. F. Crawford, Nursery Inspection and Licensing, State College P. O.
New York	Dr. A. B. Buchholz, Director, Bureau of Plant Industry, Department of Agriculture, Albany.
North Carolina	C. H. Brannon, State Entomologist, Department of Agriculture, Raleigh.
North Dakota	J. A. Munro, Entomologist, North Dakota College of Agriculture, Fargo.
Ohio	Walter J. Marion, Chief, Plant Industry, Department of Agriculture, Columbus.
Oklahoma	R. E. Montgomery, Orchard and Nursery Inspector, State Board of Agriculture, Oklahoma City.
Oregon	Frank McKennon, Chief, Division of Plant Industry, Department of Agriculture, Salem.
Pennsylvania	R. H. Bell, Director, Bureau of Plant Industry, Department of Agriculture, Harrisburg.
Rhode Island	A. E. Stene, State Entomologist, Department of Agriculture, Providence.
South Carolina	Franklin Sherman, State Entomologist, Crop Pest Commission, Clemson College P. O.
South Dakota	C. A. Russell, Secretary of Agriculture, Pierre.
Tennessee	G. M. Bentley, State Entomologist, Department of Agriculture, Knoxville.
Texas	J. M. Del Curto, Chief, Horticultural Inspection and Quarantines, Department of Agriculture, Austin.
Utah	Earl Hutchings, Supervising Inspector and Plant Quarantine Officer, Board of Agriculture, Salt Lake City.
Vermont	M. B. Cummings, Nursery Inspector, State Department of Agriculture, Burlington.
Virginia	G. T. French, State Entomologist, Department of Agriculture, Richmond.

Washington	J. I. Griner, Supervisor of Horticulture, Department of Agriculture, Olympia.
West Virginia	J. B. McLaughlin, Commissioner of Agriculture, Charleston.
Wisconsin	E. L. Chambers, State Entomologist, Department of Agriculture, Madison.
Wyoming	C. L. Corkins, State Entomologist, Department of Agriculture, Powell.
Dominion of Canada	L. S. McLaine, Secretary, Destructive Insect and Pest Act, Department of Agriculture, Ottawa.

Warning to Buyers of Nursery Stock

A valid certificate of inspection or permit issued by the State Entomologist of Kentucky is your best assurance that the nursery stock you contemplate buying is free of insects and diseases and that you will not only be protecting yourself but your neighbors as well by not bringing into your community some new plant pest. This applies to nurserymen and home owners alike. If purchases of nursery stock from other states are contemplated, it is well to investigate the locality from which the stock is to be shipped to be sure no new pest is involved and that the vicinity in which the nursery is located is free from state or federal quarantine. An inquiry to your State Entomologist or to the proper official in charge of inspection and regulation in the state in question should bring the desired information. This is doubly important if the nursery stock is to be shipped with roots in soil. It is strongly urged that peddlers of nursery stock who cannot show a permit issued by the State Entomologist of Kentucky be treated with suspicion because the favorite way of disposing of nursery stock which will not pass inspection or stock from nurseries located in sections under quarantine is to load it on trucks and ship to other states to be peddled to unsuspecting home owners at greatly reduced prices.

Japanese Beetle

The third season of trapping for Japanese beetle has been completed in Kentucky, with the following catches:

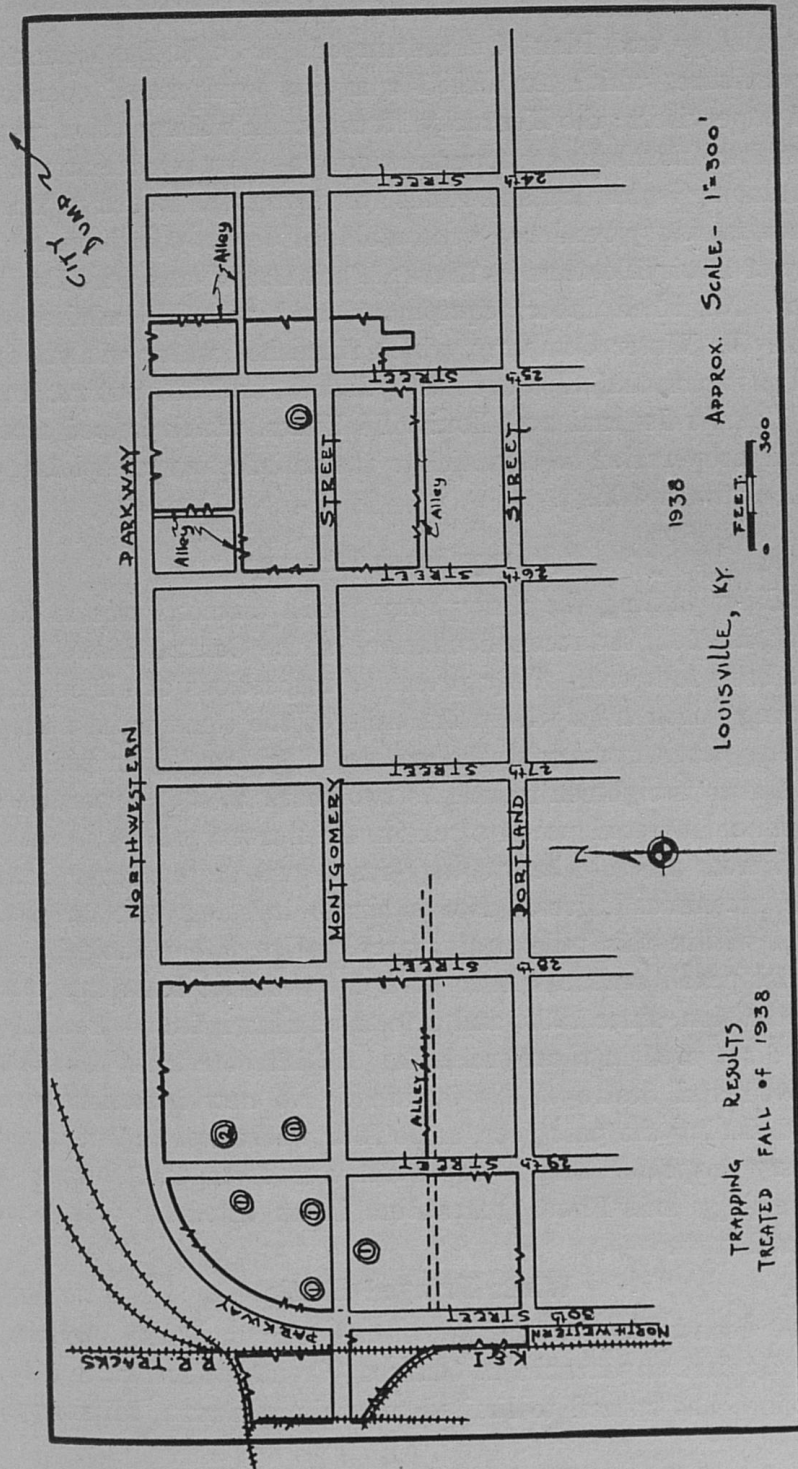

- 1936. Two beetles in Louisville and one in Lexington.
- 1937. Ten beetles in Louisville and one in Lexington.
- 1938. Sixty-two beetles in Louisville and one in Lexington.

Traps were also placed in several other cities in the state during these three years but with negative results. The ten beetles caught in Louisville during the summer of 1937 were sufficient to warrant the treatment of that area as an established infestation.

Since no agency had the legal authority to enter private property for the purpose of inspecting or treating for this pest, it was necessary to have proper legislation passed. The Kentucky Nurserymen's Association sponsored a bill which was passed by the General Assembly late in February, 1938, giving such authority to the State Entomologist or his agents. The bill did not provide an appropriation; consequently, the sum of \$700 was obtained from the emergency fund with which to purchase lead arsenate. With the assistance of the Bureau of Entomology, U. S. Department of Agriculture, and the City of Louisville, treatment of five acres declared to be the infested area was completed in May, 1938. Lead arsenate was applied at the rate of 1,000 pounds per acre.

The trapping records of 1938 indicated that our treatment had been applied too late to be most effective, since a number of larvae evidently had already pupated. After the trapping results were tabulated and the extent of the infestation determined to be approximately thirty-five acres, the Jefferson County Fiscal Court provided \$4,500 for the purchase of an insecticide to combat the pest. Following the same methods of application as previously used, lead arsenate was applied, in water, to the surface of the ground, followed by clear water under high pressure to wash the arsenate off the foliage and force it into the ground where it would reach the larvae of the Japanese beetle feeding on the grass roots. This work was begun September 30th and completed November 2nd, using a total of 35,000 pounds of lead arsenate. The effectiveness of this treatment should be revealed in the trapping record of the summer of 1939.

The timely completion of these Japanese beetle control measures is an example of cooperative effort. The cooperating agencies are the Kentucky Agricultural Experiment Station, thru its Entomologist and Extension service; the Bureau of

Trapping for Japanese Beetle in Louisville, 1938. Treated in 1938.

Entomology and Plant Quarantine of the U. S. Department of Agriculture, which furnished spraying equipment, operators, and supervisors; the Kentucky Nurserymen's Association, whose committee members spent many hours and traveled many miles in securing legislation and funds; the Louisville Board of Trade, whose secretary rendered invaluable service as coordinator; the City of Louisville, thru its Mayor, Park Board, and Fire Department, furnished labor, equipment, and valuable advice; the Louisville Water Company, which furnished water without cost and gave permission to use fire hydrants; and last but not least, the Courier-Journal and Louisville Times, which helped secure public cooperation so essential to the satisfactory completion of such an undertaking.

Phony Peach Disease

Since finding the first phony peach diseased tree in Kentucky, in 1935, the recommendations of the Central Plant Board have been followed. They prescribe inspections of all premises growing peach trees within one mile of the commercial nursery offering peach nursery stock for sale. The incubation period of the disease is eighteen months to two years, so it is impossible to determine infected peach stock in the nursery row, since most peach trees are sold before they reach two years of age; hence these recommendations. Not a single infected tree has been found within this mile radius area. Also, the principal commercial peach orchards have been inspected at least two years in succession, since 1935, and a total of nine infected trees have been discovered in these orchards. All infected trees have been removed and destroyed by burning. No new infections were found during the past year, altho four weeks were spent by the nursery inspector and a representative from the Bureau of Entomology and Plant Quarantine in an intensive search for diseased trees.

White Fringed Beetle

A destructive insect known to occur in South America, made its first appearance in Okaloosa County, Florida, in 1936, and since has spread to limited areas in Alabama, Mississippi,

Louisiana, and Florida. The principal damage is from the feeding of the legless larvae at or below the surface of the ground. The host plants include a wide variety of field crops, vegetables, and ornamentals. Since each female lays an average of 790 eggs per season, their reproduction is extremely rapid. Complete destruction of corn, cotton, potatoes, peas, beans, and other crops has been reported from the heavily infested areas. The adults cannot fly and must depend on artificial transportation or crawling, so efforts are being made to completely eradicate the pest before it becomes widespread. State and federal regulations have been set up in an effort to check the spread of this pest. However, before the complete limits of infestation were known, a few nurseries in an area later found to be infested made shipments of plants into Kentucky. The Bureau of Entomology furnished a list of shipments made by three such nurseries in New Orleans, namely: Gentilly Terrace Nursery; Reuter Seed Company; and Newsham Florist. Approximately forty such shipments were reported and the property of each recipient has been inspected for the presence of white fringed beetle. Fortunately, the distance made the cost of shipping balled plants so expensive that all shipments were without soil, thereby lessening the danger of importing the insect. To date, there has been no indication that a single white fringed beetle has become established in our state. Another check will be made of the premises where any of the above mentioned shipments have been received.

The adult belongs to the group of snout beetles and is approximately one-half inch in length and one-sixth inch across the abdomen. The color is dark gray with lighter band along the margins of wing covers. The body is covered with pale-colored hairs, which are longer on the wing covers. Any suspected beetle should be caught and sent to the Agricultural Experiment Station or to your county agent for identification. A small bottle securely corked and well wrapped is best for sending such specimens.

INSECTS AND DISEASES IN THE ORDER OF THEIR FREQUENCY
OF APPEARANCE IN KENTUCKY NURSERIES 1938-39

Insects	Diseases
Strawberry crown borer	Cedar rust
White grub	Black spot (rose)
Bagworm	Cherry leaf spot
Oriental fruit moth	Peony blotch
Blister beetle	Strawberry leaf spot
Dahlia leafhopper	Dahlia stunt
Poplar leaf tier	Delphinium crown rot
Apple leaf skeletonizer	Sweetpotato black rot.
Gladiolus thrips	Juniper twig blight
Apple leafhopper	Sweetpotato stem rot
Cherry slug	Apple crown gall
White pine cottony aphid	Anthracnose (raspberry)
Cockscomb elm gall	Canker (pussy willow)
Dogwood borer	
Tarnished plant bug	
Cucumber beetle	

KENTUCKY NURSEYMEN WHO RECEIVED CERTIFICATES OF
INSPECTION 1938-39
