

MEMORANDUM

Min No 1
Sub Station

January 15, 1919. 9890

REARRANGEMENT CIRCUIT BREAKERS

For feeder distribution on the new side - it is proposed to take the 4-breaker panel, top section 24"x48", bottom section 24"x28", from No. 2 Sub-Station old mine.

Substitute in place of the 4-breaker panel a 16"x48" top section (bottom section 16"x28") with 2 - CN 400 - (Range 250-600) breakers mounted on it. The total for No. 2 Sub then becomes 3 - CN 400 breakers and 1 - 800 breaker - 2-16" panels. All these breakers to be used as feeders. One blank panel.

The 2 - CN 400 for mounting on the 16" panel for No. 2 to be taken from No. 1 Sub.

We would then have left at No. 1 Sub - 3 CN 400 and 1 AA 800 breaker. These I propose to have mounted on 2 - 16" panels, same as at No. 2 Sub.

This rearrangement permits us to get along with the circuit breakers we now have on hand, or nearly so.

No. 1 Sub is now

400	400	400	400	400	800
-----	-----	-----	-----	-----	-----

and becomes

	16"	16"	16"	24"	16"
48"	Blank	400	800	A.C.	D.C.
		400	400		
28"
