The symptoms are pain and tenderness felt over the lower part of the abdomen either on one side or both, increased by bodily exertion, and by bowel movements, fever, chills and nausea.

The treatment is complete rest, especially during menstruation. In addition, the general health should be built up as much as possible.

The one certain cure is to keep the bowels in good condition by the use of LYDIA E. PINKHAM'S LIVER PILLS, and at the same time take a thorough course of treatment with the Vegetable Compound. If any of your symptoms seem unusual, write at once for advice to Mrs. Pinkham, Lynn Mass.

*Dear Mrs. Pinkham:—*

I gladly give you my testimonial for publication in your book.

I had not seen a well day since my little girl was born and doctored nearly all the time. I had chronic inflammation of the ovaries, ulceration of the womb and kidney trouble. I took three bottles of LYDIA E. PINKHAM'S VEGETABLE COMPOUND and felt very much better. Then six months later when I had some symptoms of the old trouble I took two bottles more. I have taken no other medicine for these complaints. Although it was thirteen years ago that I first used the Compound, what I say about my case may be of value to you just the same.
