

in time for the March number of
the Review. - I have business
in Edinburgh during part of
January.

faithfully yours

J. A. Roode

December 21.

1877

My dear Sir

I was not anxious to undertake
any great article writing just now
but as Mr. Barnes has unexpectably
agreed to conditions which I thought
he would regard as excessive, I
will try what I can do - I
cannot know of hardy papers on
widely different subjects, and whatever
I write must be in connection
with other things in which I am
interested

and with a view to future republication.

In the course of six weeks or
two months I could let you
have an Essay on the Ancient
and Modern Scientific Schools &
Thoughts. - and the effect of the
acceptance of Scientific principles (as
the basis of ^{beliefs} ~~beliefs~~) on morality and
Character. For Science must
be either ~~the~~ Sovereign or Subject.
Make it Sovereign. and you will
have indefinite ~~any~~ material
Progress.

Make it subject to Conscience and
Imagination and you will have
Spiritual Progress. Art and
Religion. - But you will not
have the kinds of progress together.

They are like a system and disastrous
and of characters alternating
periods of human history.

That is my general idea. If
you have a paper will visit you
you can let me know. - but
in any case Mr. Baines
should not count on having to
be so.

FROUDE, JAMES ANTHONY (1818-1894).
Historian and essayist. London.
A.L.S. to "My dear Sir."
21 Dec. [1877]. 3 1/2p.
(double sheet, octavo). With embossed
address of 5 Onslow Gardens, S.W.

Writing to an editor, Froude says it is difficult for him to write hasty papers "on indifferent subjects", and he must relate all his writing. He could have a paper done in two months' time on the ancient and modern views of scientific thought, and their effect on morality and character. He outlines his views on the subject, and sketches in the main lines of the article.

December 21

My dear Sir

I was not anxious to undertake any fresh article writing just now but as Mr. Barnes[?] has unexpectedly agreed to conditions which I thought he would regard as excessive, I will try what I can do. I cannot throw off hasty papers on indifferent subjects, and whatever I write must be in connection with other things in which I am interested, and with a view to future republication.

In the course of six weeks or two months I could let you have an Essay on the ancient and modern scientific schools of thought and the effect of the acceptance of scientific principles (as the basis of belief) on morality and character. Science must be either sovereign or subject. Make it sovereign, and you will have indefinite material progress. Make it subject to conscience and imagination and you will have Spirityal Progress - Art and Religion. But you will not have both kind s of progress together. They are like systole and diastole and characterize alternating periods of human history.

That is my general idea. If such a paper will suit you you can let me know - but in any case Mr. Barnes [?] should not count on having the Ms. in time for the March number of the Review - I have business in Edinburgh during part of January.

Faithfully yours
J.A. Froude.
