WHEELWRIGHT, KENTUCKY

October 24, 1952

Mr. Peter P. Senio  
U. S. Bureau of Mines  
4800 Forbes Street  
Pittsburg, Pennsylvania

Dear Mr. Senio;

We recently had the pleasure of seeing an interesting color film simulating mine haulage accidents as part of a safety training course being conducted by your Mr. Yanity and Mr. Cress.

I had assumed that the above mentioned had been photographed by professionals, am still of that opinion, however, Mr. Cress assured me it was made by you, with no claim to being a professional.

I am interested in having some of the following questions answered as relates to mine interior color photography and Mr. Cress advised you would give me the information, possibly might be available in printed form.

1. Wattage for Lights
2. Current-DC or AC- or DC with portable converter.
3. Did you travel while photographing, of from various positions, only subject moving?

We have a B & H Turret Type 16 mm camera, with F 1.5 wide angle, focusing and universal focus lenses, F 2.5-F 2.8, as well as F 4.5, 4" telephoto.

We shall be most appreciative for any or all the information and suggestions you may give us.

Leland S. Becker  
Supt. Bldgs & Grounds Dept.
