## INTRODUCTION

During the period January 1 through December 31, 1969, 653 pesticide samples were analyzed.

## LABELING REQUIREMENTS

Chemicals that require registration under the Kentucky Economic Poisons Law must bear a label stating directions for use, which, if complied with, are considered adequate for the protection of the public. With few exceptions, the label must contain a warning or caution statement, designed to prevent injury to man and other vertebrate animals, vegetation, or other useful living things. The front or display side of the label should also bear the statement "Keep Out Of Reach Of Children." If the product is shipped in interstate commerce, the label should bear the Federal registration number.

The label of the product must also contain a guaranteed analysis which shows either the name and percentage of each active ingredient together with the total percentage of the inert ingredients, or the names of each active ingredient in the descending order of their percentages together with the name of each and the total percentage of the inert ingredients. The ingredient statement of any product may be of either form except in the case of compounds, which are highly toxic to man. The ingredient statement for products containing highly toxic compounds must list the name and percentage of each active ingredient. Highly toxic materials may also be required to be colored or discolored for the protection of the public health.

The label provides the public with information on the uses of and the precautions to be taken in using all economic poisons sold in Kentucky. The name and address of the manufacturer or distributor, the net weight or measure of the contents of any package or bottle, and the brand or trademark under which the product is sold must appear on the label.

## FIELD INSPECTION

In order to adequately enforce the provision of the act, field inspectors are authorized to collect samples of economic poisons and devices and to enter any car, warehouse, store, etc. supposed to contain economic poisons or devices, for the purpose of inspection or sampling. They are also authorized to issue and enforce a written or printed stop sale or removal order on a lot of economic poison when the material being offered for sale is in violation of any of the provisions of the Kentucky Economic Poisons Law. They are authorized to hold this material at a designated place.

Field inspectors are in a position to explain the various aspects of the Kentucky Economic Poisons Law so that dealers and users of pesticide products will have an understanding of this act.

## PESTICIDE-FERTILIZER MIXTURES

An important group of specialty products are the products in which an insecticide, herbicide, or other economic poison is incorporated into a fertilizer. Because of the nature of these products, special regulations are employed in their registration. For example, an insecticide incorporated into a fertilizer is manufactured usually to be applied to the ground and, therefore, will be effective only against certain soil-inhabiting pests. Another inherent restriction in the use of these products may be in the method or in the time of application of either of the component parts of the product.

## SODIUM HYPOCHLORITE STABILITY

We continue to find sodium hypochlorite solutions with a guarantee of more than 5.25% sodium hypochlorite that have deteriorated so that they are not fully effective at the use dilution shown on the label.

In 1968 this department did a study of the stability of a sodium hypochlorite solution that was guaranteed at 6.0%.

We secured four gallons of freshly formulated material and analyzed samples on the following schedule.

February 2, all; lots no. 1 and no. 2, each month; lot no. 3, each 3 months; and lot no. 4, each 6 months.

The following table gives the results of these analyses:

## SODIUM HYPOCHLORITE

DATE ANALYZED	LOT NO. 1	LOT NO. 2	LOT NO. 3	LOT NO. 4
2-2-68	7.09%	7.21%	7.61%	6.86%
3-22-68	6.80%	6.75%		
4-22-68	6.45%	6.55%	6.25%	
5-28-68	6.17%	6.10%		
6-25-68	5.80%	5.70%		
7-24-68	5.30%	5.36%	5.06%	4.91%
8-21-68	5.04%	5.08%		
9-24-68	4.59%	4.57%		
10-21-68	4.35%	4.35%	4.22%	
11-25-68	4.22%	4.22%		
12-20-68	4.18%	4.18%		
1-22-69	4.13%	4.14%	4.03%	4.03%

Although these products were over-formulated by about 16 percent, after four months lots no. 1 and no. 2 analyzed below the guarantee of 6 percent; at the end of six-months storage lots no. 1 and no. 2 were about 0.7 percent below the guarantee; lots no. 3 and no. 4 about 1.0 percent below the guarantee.

These sodium hypochlorite solutions with a guarantee of 6 percent had a shelf-life of about 3 months even though they were over-formulated by about 16 percent.

Realizing that sodium hypochlorite solutions of high concentration lose their strength rapidly, some manufacturers over-formulate as much as 50 percent.

There are several factors that contribute to the loss in strength of these solutions, some of which are:

1. Sunlight
2. Temperature
3. Exposure to the atmosphere

In order to try and overcome some of the instability of these materials the following are some rules that should be followed:

1. Keep out of direct sunlight.
2. Store in a cool place (below 70°).
3. Do not carry in stock over 30 days.
4. Be sure that bottles are tightly capped or recapped.
5. Always use oldest stock first.
6. Do not purchase more than can be disposed of in 30 days.

The use dilution shown on the label is based on the active ingredient guarantee and if the active ingredient in a product is below the guarantee, the product loses its effectiveness in proportion to this loss.

## EXPLANATION OF TABLES

The following tables are compiled by active ingredient. Manufacturers are listed alphabetically above their respective products. The examinations reported are official samples of pesticide products offered for sale in Kentucky.

Of the samples reported, 125 samples were found to be deficient in one or more of the active ingredients guaranteed. Seventeen products were not registered when the sample was taken, and three samples were mislabeled.

The symbols in the right hand column of each table except pesticide-fertilizer mixtures have the following meaning:

- P (Passed) denotes the amount of active ingredient found was not significantly at variance from the amount guaranteed.
- D (Deficient) denotes the amount of active ingredient found was significantly below the amount guaranteed.
- X (Not registered) denotes the product was not registered in Kentucky at the time the sample was taken.
- M (Mislabeled) denotes the product did not meet the label requirements in all respects.
